# Contents

<b>1. Symmetries in Quantum Mechanics</b>	1
1.1 Symmetries in Classical Physics	1
1.2 Spatial Translations in Quantum Mechanics	19
1.3 The Unitary Translation Operator	20
1.4 The Equation of Motion for States Shifted in Space	22
1.5 Symmetry and Degeneracy of States	23
1.6 Time Displacements in Quantum Mechanics	32
1.7 Mathematical Supplement: Definition of a Group	34
1.8 Mathematical Supplement: Rotations and their Group Theoretical Properties	36
1.9 An Isomorphism of the Rotation Group	40
1.9.1 Infinitesimal and Finite Rotations	41
1.9.2 Isotropy of Space	43
1.10 The Rotation Operator for Many-Particle States	54
1.11 Biographical Notes	55
<b>2. Angular Momentum Algebra Representation of Angular Momentum Operators: Generators of SO(3)</b>	57
2.1 Irreducible Representations of the Rotation Group	57
2.2 Matrix Representations of Angular Momentum Operators	62
2.3 Addition of Two Angular Momenta	71
2.4 Evaluation of Clebsch–Gordan Coefficients	75
2.5 Recursion Relations for Clebsch–Gordan Coefficients	76
2.6 Explicit Calculation of Clebsch–Gordan Coefficients	78
2.7 Biographical Notes	85
<b>3. Mathematical Supplement: Fundamental Properties of Lie Groups</b>	87
3.1 General Structure of Lie Groups	87
3.2 Interpretation of Commutators as Generalized Vector Products, Lie’s Theorem, Rank of Lie Group	98
3.3 Invariant Subgroups, Simple and Semisimple Lie Groups, Ideals	100
3.4 Compact Lie Groups and Lie Algebras	108
3.5 Invariant Operators (Casimir Operators)	108
3.6 Theorem of Racah	109
3.7 Comments on Multiplets	109
3.8 Invariance Under a Symmetry Group	112

3.9	Construction of the Invariant Operators . . . . .	115
3.10	Remark on Casimir Operators of Abelian Lie Groups . . . . .	118
3.11	Completeness Relation for Casimir Operators . . . . .	118
3.12	Review of Some Groups and Their Properties . . . . .	120
3.13	The Connection Between Coordinate Transformations and Transformations of Functions . . . . .	121
3.14	Biographical Notes . . . . .	134
<b>4.</b>	<b>Symmetry Groups and Their Physical Meaning:</b>	
	<b>General Considerations . . . . .</b>	<b>135</b>
4.1	Biographical Notes . . . . .	140
<b>5.</b>	<b>The Isospin Group (Isobaric Spin) . . . . .</b>	<b>141</b>
5.1	Isospin Operators for a Multi-Nucleon System . . . . .	147
5.2	General Properties of Representations of a Lie Algebra . . . . .	155
5.3	Regular (or Adjoint) Representation of a Lie Algebra . . . . .	157
5.4	Transformation Law for Isospin Vectors . . . . .	161
5.5	Experimental Test of Isospin Invariance . . . . .	169
5.6	Biographical Notes . . . . .	185
<b>6.</b>	<b>The Hypercharge . . . . .</b>	<b>187</b>
6.1	Biographical Notes . . . . .	193
<b>7.</b>	<b>The SU(3) Symmetry . . . . .</b>	<b>195</b>
7.1	The Groups $U(n)$ and $SU(n)$ . . . . .	195
	7.1.1 The Generators of $U(n)$ and $SU(n)$ . . . . .	198
7.2	The Generators of $SU(3)$ . . . . .	200
7.3	The Lie Algebra of $SU(3)$ . . . . .	202
7.4	The Subalgebras of the $SU(3)$ Lie Algebra and the Shift Operators . . . . .	212
7.5	Coupling of $T$ , $U$ and $V$ Multiplets . . . . .	215
7.6	Quantitative Analysis of Our Reasoning . . . . .	216
7.7	Further Remarks About the Geometric Form of an $SU(3)$ Multiplet . . . . .	218
7.8	The Number of States on Mesh Points on Inner Shells . . . . .	219
<b>8.</b>	<b>Quarks and SU(3) . . . . .</b>	<b>231</b>
8.1	Searching for Quarks . . . . .	234
8.2	The Transformation Properties of Quark States . . . . .	234
8.3	Construction of all $SU(3)$ Multiplets from the Elementary Representations $[3]$ and $[\bar{3}]$ . . . . .	241
8.4	Construction of the Representation $D(p, q)$ from Quarks and Antiquarks . . . . .	242
	8.4.1 The Smallest $SU(3)$ Representations . . . . .	245
8.5	Meson Multiplets . . . . .	247
8.6	Rules for the Reduction of Direct Products of $SU(3)$ Multiplets . . . . .	258
8.7	$U$ -Spin Invariance . . . . .	263
8.8	Test of $U$ -Spin Invariance . . . . .	265

8.9	The Gell-Mann–Okubo Mass Formula	267
8.10	The Clebsch–Gordan Coefficients of the SU(3)	269
8.11	Quark Models with Inner Degrees of Freedom	272
8.12	The Mass Formula in SU(6)	301
8.13	Magnetic Moments in the Quark Model	301
8.14	Excited Meson and Baryon States	304
8.14.1	Combinations of More Than Three Quarks	304
8.15	Excited States with Orbital Angular Momentum	306
<b>9.</b>	<b>Representations of the Permutation Group and Young Tableaux</b>	<b>309</b>
9.1	The Permutation Group and Identical Particles	309
9.2	The Standard Form of Young Diagrams	313
9.3	Standard Form and Dimension of Irreducible Representations of the Permutation Group $S_N$	316
9.4	The Connection Between SU(2) and $S_2$	326
9.5	The Irreducible Representations of SU( $n$ )	329
9.6	Determination of the Dimension	335
9.7	The SU( $n - 1$ ) Subgroups of SU( $n$ )	339
9.8	Decomposition of the Tensor Product of Two Multiplets	341
<b>10.</b>	<b>Mathematical Excursion. Group Characters</b>	<b>345</b>
10.1	Definition of Group Characters	345
10.2	Schur’s Lemmas	346
10.2.1	Schur’s First Lemma	346
10.2.2	Schur’s Second Lemma	346
10.3	Orthogonality Relations of Representations and Discrete Groups	347
10.4	Equivalence Classes	349
10.5	Orthogonality Relations of the Group Characters for Discrete Groups and Other Relations	352
10.6	Orthogonality Relations of the Group Characters for the Example of the Group D(3)	353
10.7	Reduction of a Representation	355
10.8	Criterion for Irreducibility	355
10.9	Direct Product of Representations	356
10.10	Extension to Continuous, Compact Groups	357
10.11	Mathematical Excursion: Group Integration	357
10.12	Unitary Groups	360
10.13	The Transition from U( $N$ ) to SU( $N$ ) for the example SU(3)	361
10.14	Integration over Unitary Groups	363
10.15	Group Characters of Unitary Groups	366
<b>11.</b>	<b>Charm and SU(4)</b>	<b>385</b>
11.1	Particles with Charm and the SU(4)	387
11.2	The Group Properties of SU(4)	387
11.3	Tables of the Structure Constants $f_{ijk}$ and the Coefficients $d_{ijk}$ for SU( $N$ )	397
11.4	Multiplet Structure of SU(4)	399

---

11.5	Advanced Considerations . . . . .	406
11.5.1	Decay of Mesons with Hidden Charm . . . . .	406
11.5.2	Decay of Mesons with Open Charm . . . . .	407
11.5.3	Baryon Multiplets . . . . .	408
11.6	The Potential Model of Charmonium . . . . .	418
11.7	The SU(4) [SU(8)] Mass Formula . . . . .	426
11.8	The $\Upsilon$ Resonances . . . . .	430
<b>12.</b>	<b>Mathematical Supplement . . . . .</b>	<b>435</b>
12.1	Introduction . . . . .	435
12.2	Root Vectors and Classical Lie Algebras . . . . .	439
12.3	Scalar Products of Eigenvalues . . . . .	444
12.4	Cartan–Weyl Normalization . . . . .	447
12.5	Graphical Representation of the Root Vectors . . . . .	448
12.6	Lie Algebra of Rank 1 . . . . .	449
12.7	Lie Algebras of Rank 2 . . . . .	449
12.8	Lie Algebras of Rank $l > 2$ . . . . .	450
12.9	The Exceptional Lie Algebras . . . . .	451
12.10	Simple Roots and Dynkin Diagrams . . . . .	452
12.11	Dynkin’s Prescription . . . . .	454
12.12	The Cartan Matrix . . . . .	456
12.13	Determination of all Roots from the Simple Roots . . . . .	457
12.14	Two Simple Lie Algebras . . . . .	459
12.15	Representations of the Classical Lie Algebras . . . . .	460
<b>13.</b>	<b>Special Discrete Symmetries . . . . .</b>	<b>465</b>
13.1	Space Reflection (Parity Transformation) . . . . .	465
13.2	Reflected States and Operators . . . . .	467
13.3	Time Reversal . . . . .	468
13.4	Antiunitary Operators . . . . .	470
13.5	Many-Particle Systems . . . . .	474
13.6	Real Eigenfunctions . . . . .	475
<b>14.</b>	<b>Dynamical Symmetries . . . . .</b>	<b>477</b>
14.1	The Hydrogen Atom . . . . .	477
14.2	The Group SO(4) . . . . .	480
14.3	The Energy Levels of the Hydrogen Atom . . . . .	481
14.4	The Classical Isotropic Oscillator . . . . .	482
14.4.1	The Quantum Mechanical Isotropic Oscillator . . . . .	483
<b>15.</b>	<b>Mathematical Excursion: Non-compact Lie Groups . . . . .</b>	<b>497</b>
15.1	Definition and Examples of Non-compact Lie Groups . . . . .	497
15.2	The Lie Group SO(2, 1) . . . . .	505
15.3	Application to Scattering Problems . . . . .	509
<b>16.</b>	<b>Proof of Racah’s Theorem . . . . .</b>	<b>513</b>
	<b>Subject Index . . . . .</b>	<b>519</b>

---

## Contents of Examples and Exercises

1.1	Angular Momenta in Different Reference Frames . . . . .	5
1.2	Conserved Quantities of Specified Fields . . . . .	6
1.3	Noether's Theorem (for Improved Insight) . . . . .	8
1.4	Time-Invariant Equations of Motion: The Lagrange Function and Conserved Quantities . . . . .	11
1.5	Conditions for Translational, Rotational and Galilean Invariance . .	12
1.6	Conservation Laws in Homogeneous Electromagnetic Fields . . . .	16
1.7	Matrix Elements of Spatially Displaced States . . . . .	25
1.8	The Relation $(i\hat{p}/\hbar)^n \hat{B}(x)$ and Transformation Operators . . . . .	26
1.9	Translation of an Operator $\hat{A}(x)$ . . . . .	28
1.10	Generators for Translations in a Homogeneous Field . . . . .	29
1.11	Transformation of Vector Fields Under Rotations . . . . .	44
1.12	Transformation of Two-Component Spinors Under Rotations . . . .	48
1.13	Measuring the Direction of Electron Spins . . . . .	52
2.1	Special Representation of the Spin-1 Operators . . . . .	64
2.2	Calculation of the Clebsch–Gordan Coefficients for Spin–Orbit Coupling . . . . .	82
3.1	Lie Algebra of SO(3) . . . . .	90
3.2	Calculation with Complex $n \times n$ Matrices . . . . .	91
3.3	Proof of a Commutation Relation . . . . .	93
3.4	Generators and Structure Constants of Proper Lorentz Transformations . . . . .	94
3.5	Algebra of $\hat{p}_\nu$ and $\hat{J}_\nu$ . . . . .	99
3.6	Translation–Rotation Group . . . . .	100
3.7	Simple and Semisimple Lie Groups . . . . .	102
3.8	Reduction of $\exp\{-\frac{1}{2}i\phi\mathbf{n} \cdot \hat{\boldsymbol{\sigma}}\}$ . . . . .	104
3.9	Cartan's Criterion for Semisimplicity . . . . .	105
3.10	Semisimplicity of SO(3) . . . . .	107
3.11	An Invariant Subspace to the Rotation Group . . . . .	109
3.12	Reduction of an Invariant Subspace . . . . .	110
3.13	Casimir Operator of the Rotation Group . . . . .	113
3.14	Some Groups with Rank 1 or 2 . . . . .	114
3.15	Construction of the Hamiltonian from the Casimir Operators . . . .	119
3.16	Transformations with $r$ Parameters of an $n$ -Dimensional Space . .	123
3.17	Generators and Infinitesimal Operators of SO( $n$ ) . . . . .	124
3.18	Matrix Representation for the Lie Algebra of Spin 1 . . . . .	126

3.19	Translations in One-dimensional Space; the Euclidean Group $E(3)$ in Three Dimensions . . . . .	130
3.20	Homomorphism and Isomorphism of Groups and Algebra . . . . .	132
3.21	Transformations of the Structure Constants . . . . .	133
4.1	Conservation Laws with Rotation Symmetry and Charge Independent Forces . . . . .	136
4.2	Energy Degeneracy for Various Symmetries . . . . .	139
4.3	Degeneracy and Parity of More Symmetries . . . . .	140
5.1	Addition Law for Infinitesimal $SU(2)$ Transformations . . . . .	145
5.2	The Deuteron . . . . .	149
5.3	The Charge Independence of Nuclear Forces . . . . .	151
5.4	The Pion Triplet . . . . .	152
5.5	Normalization of the Group Generators . . . . .	158
5.6	The $G$ Parity . . . . .	164
5.7	Representation of a Lie Algebra, Regular Representation of the Algebra of Orbital Angular Momentum Operators . . . . .	168
5.8	The Wigner–Eckart Theorem . . . . .	172
5.9	Pion Production in Proton–Deuteron Scattering . . . . .	175
5.10	Production of Neutral Pions in Deuteron–Deuteron Scattering . . .	176
5.11	Pion–Nucleon Scattering . . . . .	176
5.12	The Decay of the Neutral Rho Meson . . . . .	183
6.1	Hypercharge of Nuclei . . . . .	188
6.2	The Hypercharge of the $\Delta$ Resonances . . . . .	189
6.3	The Baryons . . . . .	189
6.4	Antibaryons . . . . .	191
6.5	Isospin and Hypercharge of Baryon Resonances . . . . .	191
7.1	The Lie Algebra of $SU(2)$ . . . . .	199
7.2	Linear Independence of the Generators $\hat{\lambda}_i$ . . . . .	201
7.3	Symmetry of the Coefficients $d_{ijk}$ . . . . .	204
7.4	Antisymmetry of the Structure Constants $f_{ijk}$ . . . . .	206
7.5	Calculation of some $d_{ijk}$ Coefficients and Structure Constants . . .	207
7.6	Relations Between the Structure Constants and the Coefficients $d_{ijk}$ . . . . .	209
7.7	Casimir Operators of $SU(3)$ . . . . .	210
7.8	Useful Relations for $SU(3)$ Casimir Operators . . . . .	211
7.9	The Increase of the Multiplicity of States on the Inner Shells of $SU(3)$ Multiplets . . . . .	221
7.10	Particle States at the Centre of the Baryon Octet . . . . .	225
7.11	Calculation of the Dimension of the Representation $D(p, q)$ . . . . .	226
7.12	The Casimir Operator $\hat{C}_1 = \sum_i \hat{F}_i^2$ in terms of $p$ and $q$ . . . . .	228
8.1	The Generators of $SU(3)$ in the Representation $[3]$ . . . . .	235
8.2	Transformation Properties of the States of the Antitriplet $[\bar{3}]$ . . . .	238
8.3	Non-equivalence of the Two Fundamental Representations of $SU(3)$ . . . . .	239
8.4	The Weight of a State . . . . .	243

8.5	The Maximum Weight of the Quark Triplet [3] and Antiquark Triplet $\bar{[3]}$ . . . . .	244
8.6	The Pseudoscalar Mesons . . . . .	248
8.7	Example (for Deeper Insight): The $K^0$ and $\bar{K}^0$ Mesons and Their Decays . . . . .	249
8.8	The Scalar Mesons . . . . .	255
8.9	The Vector Mesons . . . . .	256
8.10	The Tensor Mesons . . . . .	257
8.11	Other Resonances . . . . .	258
8.12	Reduction of SU(2) Multiplets . . . . .	261
8.13	Construction of the Neutron Wave Function . . . . .	280
8.14	Construction of the Wave Functions of the Baryon Decuplet . . . . .	283
8.15	Construction of the Spin-Flavour Wave Functions of the Baryon Octet . . . . .	292
9.1	Basis Functions of $S_3$ . . . . .	318
9.2	Irreducible Representations of $S_4$ . . . . .	320
9.3	Multiplets of a System of Three Spin- $\frac{1}{2}$ Particles . . . . .	327
9.4	Multiplets of a Two-Particle System in the Group SU(3) . . . . .	330
9.5	Multiplets of the SU(3) Constructed from Three Particles . . . . .	331
9.6	Dimension Formula for the SU(3) . . . . .	337
9.7	Decomposition of a Tensor Product . . . . .	343
9.8	Representations of the SU(2) and Spin . . . . .	344
9.9	Triality and Quark Confinement . . . . .	344
10.1	The Group $D_3$ . . . . .	350
10.2	The Rotation Group O(3) . . . . .	351
10.3	Application of Group Characters: Partition Function for the Colour Singlet Quark–Gluon Plasma with Exact SU(3) Symmetry . . . . .	373
10.4	Proof of the Recursion Formula for the Dimensions of the SU( $n$ ) Representations . . . . .	378
11.1	Anticommutators of the Generators of SU( $N$ ) . . . . .	389
11.2	Trace of a Generator Product in the SU( $N$ ) . . . . .	391
11.3	The Completeness Relation for $\hat{F}_a$ . . . . .	392
11.4	Eigenvalue of the Casimir Operator $\hat{C}_1$ of a Fundamental Representation of the SU( $N$ ) . . . . .	396
11.5	SU(3) Content of the SU(4) Meson Multiplet . . . . .	411
11.6	Decomposition of the Product $[4] \otimes [4] \otimes [4]$ . . . . .	413
11.7	SU(3) Content of the SU(4) Baryon Multiplet . . . . .	414
11.8	Decomposition and Dimension of Higher SU(4) Multiplets . . . . .	416
11.9	Mathematical Supplement. Airy Functions . . . . .	422
12.1	Weight Operators of the SU(4) Algebra . . . . .	438
12.2	Proof of a Relation for the Structure Constants $C_{ikl}$ . . . . .	444
12.3	Dynkin Diagrams for $B_l$ . . . . .	455
12.4	The Cartan Matrices for SU(3), SU(4) and $G_2$ . . . . .	456

---

12.5	Determination of the Roots of $G_2$ Using the Corresponding Simple Roots . . . . .	458
12.6	Analysis of $SU(3)$ . . . . .	463
13.1	Effect of an Antiunitary Operator on Matrix Elements of Wavefunctions . . . . .	470
13.2	Commutation Relations Between $\hat{U}$ and $\hat{S}$ . . . . .	473
14.1	Energy and Radial Angular Momentum of the Hydrogen Atom . . . . .	484
14.2	The Runge–Lenz Vector . . . . .	485
14.3	Properties of the Runge–Lenz Vector $\hat{M}$ . . . . .	485
14.4	The Commutator Between $\hat{M}$ and $\hat{H}$ . . . . .	486
14.5	The Scalar Product $\hat{L} \cdot \hat{M}$ . . . . .	489
14.6	Determination of $\hat{M}^2$ . . . . .	490
14.7	Proof of the Commutation Relation for $[\hat{M}_i, \hat{L}_j]_-$ . . . . .	492
14.8	Proof of the Commutation Relation for $[\hat{M}_i, \hat{H}_j]_-$ . . . . .	494
15.1	Representation of $SU(2)$ Matrices . . . . .	498
15.2	Representation of $SU(1, 1)$ Matrices . . . . .	499
15.3	Non-compactness of the Lorentz Group . . . . .	501
15.4	Generators of $SO(p, q)$ . . . . .	501
15.5	Casimir Operator of $SO(2, 1)$ . . . . .	506
15.6	Coordinate Representation of $SO(2, 1)$ Operators . . . . .	509
16.1	The Eigenvalue of the Second-Order Casimir Operator of $SU(3)$ . . . . .	518
