Introduction	1
1. Some Background Material and Preliminary Results	5
1.1 The Radon-Nikodym Theorem	5
1.2 Uniform Integrability	10
1.3 Two Measures Associated with a Point Transformation	13
1.4 Kakutani's Dichotomy Theorem	16
1.5 The Structure of Non-negative Continuous Martingales	17
Notes and References	19
2. Transformation of Measure Induced by Adapted Shifts ...	21
2.1 The Girsanov Theorem	21
2.2 Integrability Conditions on A_t	25
2.3 Transformation of Measure Induced on $C_o([0, 1])$ by Direct Shifts	28
2.4 Transformations of Measure Induced on $C_o([0, 1])$ by Indirect Shifts	30
2.5 The Innovation Theorem	37
2.6 A Dimension-free Extension of Results of the Previous Sections	41
2.7 The Representability of Measures by Shifts	47
Notes and References	51
3. Transformation of Measure Induced by General Shifts	53
3.1 Introduction	53
3.2 The Change of Variables Formula for a Small Perturbation of the Identity	56
3.3 H -Regularity of Random Variables	71
3.4 Some Preliminaries	80
3.5 The Change of Variables Formula	86
3.6 A Comparison Between the Formulas Associated with Adapted and Non Adapted Cases	94
Notes and References	97

4. The Sard Inequality	99
4.1 Introduction and Preliminaries	99
4.2 The Measurability of the Forward Image	102
4.3 The Sard Inequality I	103
4.4 The Sard Inequality II	109
4.5 Some Applications to Absolute Continuity	112
Notes and References	113
5. Transformation of Measure Under Anticipative Flows	115
5.1 Introduction and Finite Dimensional Flows	115
5.2 Cylindrical Flows	120
5.3 Infinite Dimensional Flows	127
5.4 A Singular Flow on the Classical Wiener Space	140
Notes and References	156
6. Monotone Shifts	157
6.1 Introduction	157
6.2 Monotone Shifts	158
6.3 Absolute Continuity of Monotone Shifts-I	162
6.4 Absolute Continuity of Monotone Shifts-II	171
6.5 Shifts of Hammerstein Type	176
Notes and References	180
7. Generalized Radon-Nikodym Derivatives	181
7.1 Introduction	181
7.2 The \mathcal{G}_λ Class of Wiener Functionals and its Composition with Shifts	181
7.2.1 The \mathcal{G}_λ -class of Wiener Functionals	181
7.2.2 The Extendibility of \mathcal{G}_λ Functionals	184
7.3 A Generalized R-N Derivative for \mathcal{G}_λ Functionals	185
7.4 The Conditioning of \mathcal{G}_λ Functionals with Respect to Certain Sub-sigma-fields	189
7.5 Composition of the Rademacher Class of Wiener Functionals with Shifts	190
7.6 The Composition Rules	195
7.6.1 The Cylindrical Case	195
7.6.2 Extensions of the Composition Rules	197
Notes and References	205
8. Random Rotations	207
8.1 Introduction	207
8.2 Random Rotations	208
8.3 A Partial Converse to Theorem 8.2.1	216
8.4 The Invertibility of $Tw = w + R(w)h$ and that of \hat{R}	218
8.5 Stochastic Calculus of Rotations	220

8.5.1	A New Derivation and Calculation of $E[\delta\eta \mathcal{B}]$	223
8.5.2	Case of Deterministic R	225
8.6	Transformations of Measure Induced by Euclidean Motions of the Wiener Path	226
	Notes and References	231
9.	The Degree Theorem on Wiener Space	233
9.1	Introduction	233
9.2	Measure Theoretic Degree	234
9.3	Applications to Absolute Continuity	240
9.4	Relations with Leray-Schauder Degree	246
	Notes and References	254
A.	Some Inequalities	255
A.1	Gronwall and Young Inequalities	255
	A.1.1 Gronwall Inequality	255
	A.1.2 Young Inequality	255
A.2	Some Inequalities for $\det_2(I_H + A)$	256
B.	An Introduction to Malliavin Calculus	259
B.1	Introduction to Abstract Wiener Space	259
B.2	An Introduction to Analysis on Wiener Space	261
B.3	Construction of Sobolev Derivatives	263
B.4	The Divergence	266
B.5	Ornstein-Uhlenbeck Operator and Meyer Inequalities	269
B.6	Some Useful Lemmas	272
B.7	Local Versus Global Differentiability of Wiener Functionals	279
B.8	Exponential Integrability of Wiener Functionals and Poincaré Inequality	281
	Notes and References	288
	References	289
	Index	295
	Notations	297
