Jean BERTOIN : «SUBORDINATORS :  
EXAMPLES AND APPLICATIONS»

<b>0.</b>	<b>Foreword</b>	4
<b>1.</b>	<b>Elements on subordinators</b>	5
1.1	Definitions and first properties	5
1.2	The Lévy-Khintchine formula	7
1.3	The renewal measure	9
1.4	The range of a subordinator	13
<b>2.</b>	<b>Regenerative property</b>	17
2.1	Regenerative sets	17
2.2	Connection with Markov processes	19
<b>3.</b>	<b>Asymptotic behaviour of last passage times</b>	23
3.1	Asymptotic behaviour in distribution	23
3.1.1	The self-similar case	23
3.1.2	The Dynkin-Lamperti theorem	24
3.2	Asymptotic sample path behaviour	27
<b>4.</b>	<b>Rates of growth of local time</b>	31
4.1	Law of the iterated logarithm	31
4.2	Modulus of continuity	35
<b>5.</b>	<b>Geometric properties of regenerative sets</b>	39
5.1	Fractal dimensions	39
5.1.1	Box-counting dimension	39
5.1.2	Hausdorff and packing dimensions	41
5.2	Intersections with a regenerative set	43
5.2.1	Equilibrium measure and capacity	43
5.2.2	Dimension criteria	45
5.2.3	Intersection of independant regenerative sets	47
<b>6.</b>	<b>Burgers equation with Brownian initial velocity</b>	50
6.1	Burgers equation and the Hopf-Cole solution	50
6.2	Brownian initial velocity	51
6.3	Proof of the theorem	52
<b>7.</b>	<b>Random covering</b>	55
7.1	Setting	55
7.2	The Laplace exponent of the uncovered set	57
7.3	Some properties of the uncovered set	57

<b>8.</b>	<b>Lévy processes</b>	62
8.1	Local time at a fixed point	62
8.2	Local time at the supremum	65
8.3	The spectrally negative case	67
8.4	Bochner's subordination for Lévy processes	69
<b>9.</b>	<b>Occupation times of a linear Brownian motion</b>	73
9.1	Occupation times and subordinators	73
9.2	Lévy measure and Laplace exponent	74
9.2.1	Lévy measure via excursion theory	74
9.2.2	Laplace exponent via the Sturm-Liouville equation	75
9.2.3	Spectral representation of the Laplace exponent	77
9.3	The zero set of a one-dimensional diffusion	79

**Fabio MARTINELLI: «LECTURES ON GLAUBER DYNAMICS  
FOR DISCRETE SPIN MODELS»**

<b>1.</b>	<b>Introduction</b>	96
<b>2.</b>	<b>Gibbs Measures of Lattice Spin Models</b>	98
2.1	Notation	98
2.2	Gibbs Measures	99
2.3	Weak and String Mixing Conditions	100
2.4	Mixing properties and bounds on relative densities	102
<b>3.</b>	<b>The Glauber Dynamics</b>	110
3.1	The Dynamics in Finite Volume	110
3.2	Infinite Volume Dynamics	110
3.3	Graphical Construction	111
3.4	Attractive Dynamics for Ferromagnetic Interactions	113
3.5	Spectral Gap and Logarithmic Sobolev Constant	114
3.6	From Single Spin Dynamics to Block Dynamics	118
3.7	General Results on the Spectral Gap	119
3.8	General Results on the Logarithmic Sobolev Constant	124
3.9	Possible Rates of Convergence to Equilibrium	125
<b>4.</b>	<b>One Phase Region</b>	130
4.1	The Attractive Case	130
4.2	The General Case : Recursive Analysis	134
<b>5.</b>	<b>Boundary Phase Transitions</b>	144
5.1	The Solid-on-Solid Approximation	144
5.2	Back to the Ising-Model	148
5.3	Recent Progresses	149
<b>6.</b>	<b>Phase Coexistence</b>	151
6.1	Some Preliminary Key Equilibrium Results	152
6.2	A Geometric Bound on the Spectral Gap	155
6.3	A Lower Bound on the Spectral Gap with + B.C	158
6.4	A Lower Bound on the Spectral Gap with Free B.C	161

6.5	Upper Bound on the Spectral Gap with Free B.C	163
6.6	Mixed B.C	164
6.7	Applications	164
<b>7.</b>	<b>Glauber Dynamics for the Dilute Ising Model</b>	<b>170</b>
7.1	The Dynamics in the Paramagnetic Phase	171
7.2	The Dynamics in the Griffiths Phase : $\mathbf{p} < \mathbf{p}_c$	171
7.3	The Dynamics in the Griffiths Phase : $\mathbf{p} \geq \mathbf{p}_c$	175
7.4	A Coarse Grained Description Above $\mathbf{p}_c$	178
7.5	Proof of the Main Results Above $\mathbf{p}_c$	181

**Yuval PERES : « PROBABILITY ON TREES :  
AN INTRODUCTORY CLIMB »**

1.	Preface	195
2.	Basic Definitions and a Few Highlights	197
3.	Galton-Watson Trees	203
4.	General percolation on a connected graph	204
5.	The First-Moment Method	206
6.	Quasi-independent Percolation	209
7.	The Second Moment Method	210
8.	Electrical Networks	213
9.	Infinite Networks	219
10.	The Method of Random Paths	221
11.	Transience of Percolation Clusters	223
12.	Subperiodic Trees	228
13.	The Random Walks $RW_\lambda$	230
14.	Capacity	231
15.	Intersection-Equivalence	238
16.	Reconstruction for the Ising Model on a Tree	243
17.	Unpredictable Paths in $\mathbf{Z}$ and EIT in $\mathbf{Z}^3$	255
18.	Tree-Indexed Processes	260
19.	Recurrence for Tree-Indexed Markov Chains	265
20.	Dynamical Percolation	266
21.	Stochastic Domination Between Trees	272
