

Contents

1. Radio Astronomical Fundamentals	1
2. Electromagnetic Wave Propagation Fundamentals	9
3. Wave Polarization.....	11
4. Signal Processing and Receivers.....	15
5. Fundamentals of Antenna Theory	27
6. Filled Aperture Antennas	29
7. Interferometers and Aperture Synthesis	35
8. Observational Methods	39
9. Emission Mechanisms of Continuous Radiation	45
10. Some Examples of Thermal and Non-thermal Radio Sources.....	49
11. Spectral Line Fundamentals	53
12. Line Radiation of Neutral Hydrogen	55
13. Recombination Lines	63
14. Molecules in Interstellar Space	71
15. Solutions for Chapter 1	79
16. Solutions for Chapter 2	85
17. Solutions for Chapter 3	89
18. Solutions for Chapter 4	91
19. Solutions for Chapter 5	99

20. Solutions for Chapter 6	101
21. Solutions for Chapter 7	107
22. Solutions for Chapter 8	113
23. Solutions for Chapter 9	119
24. Solutions for Chapter 10	123
25. Solutions for Chapter 11	129
26. Solutions for Chapter 12	133
27. Solutions for Chapter 13	143
28. Solutions for Chapter 14	151
Index	159
