

Contents

1. Introduction	1
2. Single-Echelon Inventory Models	7
2.1 Terminology and Classification	7
2.1.1 Classification of Inventory Control Systems	7
2.1.2 Motives of Inventory Control and Stock Classification .	8
2.1.3 Uncertainty and Planning Techniques	10
2.2 Single-Product Inventory Modeling	12
2.2.1 Demand	12
2.2.1.1 Analysis of Demand Data	13
2.2.1.2 Normal Distribution	16
2.2.1.3 Mixed-Erlang Distribution	18
2.2.2 Lead Time	19
2.2.2.1 Deterministic Lead Time	21
2.2.2.2 Stochastic Lead Time	22
2.2.2.3 Demand Correlation	23
2.2.3 Input Coefficients and Yield	25
2.2.4 Inventory Control and System Dynamics	26
2.2.5 Cost and Service Performance Measures	28
2.3 Safety Stock Planning Under Service Level Constraints	33
2.3.1 Lot-for-Lot Ordering	36
2.3.2 Batch Ordering	41
2.3.3 Stochastic Lead Times and Capacity Constraints	45
2.3.4 Lost Sales Inventory Model	46
2.3.5 Numerical Example	48
2.3.6 Aspects for Safety Stock Reduction	52
2.4 Feedforward Versus Feedback Inventory Control	54
3. Materials Coordination in Supply Chains	57
3.1 Multi-Echelon Production/Inventory Systems	57
3.1.1 Classification and Modeling Aspects	58
3.1.1.1 Serial Systems	60
3.1.1.2 Divergent Systems	61
3.1.1.3 Convergent Systems	63

	3.1.1.4	General Acyclic Systems	64
	3.1.1.5	General Cyclic Systems	65
	3.1.2	Demand Analysis	66
3.2		Concepts of Information and Materials Flow	68
	3.2.1	Installation Stock Policies	69
	3.2.2	Echelon Stock Policies	70
	3.2.3	Material Requirements Planning	74
4.		Safety Stocks in Multi-Echelon Systems	77
4.1		Serial Systems	77
	4.1.1	Full Delay Approaches	78
	4.1.1.1	The Model of Clark and Scarf	78
	4.1.1.2	The Algorithm of Van Houtum and Zijm	83
	4.1.1.3	Models with Service Level Constraints	86
	4.1.2	No Delay Approaches	87
	4.1.2.1	The Model of Simpson	87
	4.1.2.2	Dynamic Programming Algorithms	96
	4.1.2.3	Local Search Heuristics	101
	4.1.2.4	Effects in Allocation of Safety Stocks	105
	4.1.3	Comparison and Synthesis	106
	4.1.3.1	Adjustment of Safety Stock Levels in the Simpson Model	108
	4.1.3.2	Combination of Full Delay and No Delay Ap- proaches	111
	4.1.4	Extensions of the Simpson Model	112
	4.1.4.1	Different Service Measure	112
	4.1.4.2	Positive Customer Service Time	116
	4.1.4.3	Stochastic Processing Times	117
	4.1.4.4	Batch Ordering	120
	4.1.4.5	Lost Demand	122
4.2		Divergent Systems	122
	4.2.1	Full Delay Approaches	122
	4.2.2	Simpson Modeling Approach	125
	4.2.3	Comparison and Synthesis	128
	4.2.4	Extensions	128
	4.2.4.1	Different Service Measure	128
	4.2.4.2	Service Time Differentiation	132
4.3		Convergent Systems	139
	4.3.1	Full Delay Approaches	139
	4.3.2	Simpson Modeling Approach	140
	4.3.3	Different Service Measure	143
4.4		General Systems	145
	4.4.1	No Delay Optimization Model	145
	4.4.2	Exact Solution Algorithms	148
	4.4.3	Heuristic Solution Algorithms	152

4.4.3.1	Linear Approximation	152
4.4.3.2	Solution Characterization	154
4.4.3.3	Solution Construction Techniques	156
4.4.3.4	Descent Solution Improvement	156
4.4.3.5	Simulated Annealing	158
4.4.3.6	Threshold Accepting	160
4.4.3.7	Tabu Search	161
4.5	Comparative Analysis of Heuristic Solution Procedures	163
4.5.1	Test Set Generation	163
4.5.2	Definition of Performance Measures	165
4.5.3	Numerical Results	166
4.6	Cyclic Systems with External and Internal Returns	170
4.6.1	Model Formulation	170
4.6.2	Solution Principle	173
4.7	Extensions	177
5.	Concluding Remarks	179
Appendix		181
A.	Concavity Properties	181
A.1	Order-up-to-Policy	181
A.1.1	Safety Stock	181
A.1.2	On-Hand Stock	182
A.2	Reorder-Point, Order-Level-Policy	183
A.3	Solution Separation	184
B.	Minimal Coverage Properties	187
B.1	Serial Systems	187
B.2	Divergent Systems	188
B.3	Convergent Systems	189
C.	Numerical Algorithms	191
