## Contents

1.	Introduction				
	1.1	Historical Remarks	1		
	1.2	Surface Space-Charge and Surface States:			
		Some Preliminary Remarks	13		
2.	Surface Space-Charge Region in Thermal Equilibrium				
	2.1	Solutions of Poisson's Equation	21		
	2.2	Surface Space-Charge	25		
	2.3	Shape of Surface Barriers	27		
	2.4	Comparison of Space-Charge Layers			
		at Semiconductor and Metal Surfaces	28		
	2.5	Quantum Size-Effects in Space-Charge Layers	28		
3.	Sur	Surface States			
	3.1	Virtual Gap States of the Complex Band Structure	33		
	3.2	Intrinsic Surface States: Nearly Free Electron Model	36		
	3.3	Intrinsic Surface States: Tight-Binding Approximation	44		
	3.4	Dangling Bonds	47		
	3.5	Adatom-Induced Surface States: Tight-Binding Approach	51		
	3.6	Adatom-Induced Surface Dipoles: Electronegativity Concept .	53		
	3.7	Adatom-Induced Surface States and Dipoles: ViGS Model $\ldots$	56		
4.	Oco	cupation of Surface States and Surface Band-Bending			
	in 7	Thermal Equilibrium	59		
5.	Sur	face Space-Charge Region in Non-Equilibrium	67		
	5.1	Surface Photovoltage	67		
	5.2	Dember Effect	73		
	5.3	Surface Transport	74		
		5.3.1 Surface Excess of Carriers	74		
		5.3.2 Surface Conductance	76		
		5.3.3 Surface Mobility	76		
		5.3.4 Field Effect of Surface Conductance	78		

6.	Interface States					
	6.1	Metal–Semiconductor Contacts: Metal–Induced Gap States 81				
	6.2	MIGS-and-Electronegativity Model				
		of Metal–Semiconductor Contacts				
	6.3	Slope Parameters of Barrier Heights in Schottky Contacts 91				
	6.4	Defects at Metal–Semiconductor Interfaces				
	6.5	Band Lineup in Semiconductor Heterostructures:				
		IFIGS-and-Electronegativity Model				
	6.6	Band Lineup at Semiconductor Heterostructures:				
		Tight-Binding Approach    98				
	6.7	Historical Notes 100				
7.	Cle	aved {110} Surfaces of III-V				
	and	II-VI Compound Semiconductors				
	7.1	Ionicity and Core-Level Spectroscopy				
		of Compound Semiconductors 105				
		7.1.1 Layer Model of Photoemitted Electrons 105				
		7.1.2 Charge Transfer in the Bulk				
		of Compound Semiconductors 109				
	7.2	Surface Core-Level Shifts 112				
	7.3	Geometrical Surface Structure				
	7.4	Surface Phonons				
	7.5	Electronic Surface States				
		7.5.1 Intrinsic Versus Extrinsic Surface States 128				
		7.5.2 Cleavage-Induced Surface States:				
		InAs(110) as an Example				
		7.5.3 Intrinsic Surface States				
	7.6	Temperature Dependence of the Ionization Energy 137				
	7.7	Chemical Trends of the Ionization Energy 140				
8.	${10}$	0} Surfaces of III-V, II-VI,				
	and	I-VII Compound Semiconductors				
	wit	h Zincblende Structure 145				
	8.1	Reconstructions and Trends in Chemical Compositions 145				
	8.2	Dimerization				
	8.3	Missing Dimer Structures				
	8.4	Dimerization, Occupation of Dangling Bonds,				
		and Electron Counting 161				
	8.5	Intrinsic Surface Band Structure 166				
	8.6	Fermi-Level Pinning by Extrinsic Surface States 167				
	8.7	Ionization Energy 168				
9.	{10	0} Surfaces of Diamond, Silicon, Germanium,				
	and	Cubic Silicon Carbide 169				
	9.1	Atomic Arrangement
