
Contents

1	Introduction	1
1.1	The $M/M/1$ Queue	2
1.2	Basic Concepts of Queueing Networks	3
1.3	Queueing Network Equations and Fluid Models	11
1.4	Outline of Lectures	14
2	The Classical Networks	17
2.1	Main Results	18
2.2	Stationarity and Reversibility	23
2.3	Homogeneous Nodes of Kelly Type	27
2.4	Symmetric Nodes	32
2.5	Quasi-Reversibility	39
3	Instability of Subcritical Queueing Networks	53
3.1	Basic Examples of Unstable Networks	54
3.2	Examples of Unstable FIFO Networks	60
3.3	Other Examples of Unstable Networks	71
4	Stability of Queueing Networks	77
4.1	Some Markov Process Background	80
4.2	Results for Bounded Sets	92
4.3	Fluid Models and Fluid Limits	100
4.4	Demonstration of Stability	116
4.5	Appendix	127
5	Applications and Some Further Theory	139
5.1	Single Class Networks	140
5.2	FBFS and LBFS Reentrant Lines	144
5.3	FIFO Networks of Kelly Type	147
5.4	Global Stability	155
5.5	Relationship Between QN and FM Stability	163
