

# Table of contents

Chapter 14 of volume 1 and Chapter 26 of volume 2 are available in pdf format on the CD-ROM attached to volume 1. The system requirements are Windows 98 and higher. Both pdf files contain links to computer animations. To see the animations, one double clicks on the active links contained inside the pdf documents. The animations are then displayed in an internet browser, such Microsoft Internet Explorer or Netscape. Alternatively, gif-file animations are also provided.

<b>1</b>	<b>Flow regime transition criteria</b>	<b>1</b>
1.1	Introduction	1
1.2	Pool flow	3
1.3	Adiabatic flows	6
1.3.1	Two important velocity scales	6
1.3.2	Channel flow – vertical pipes	9
1.3.3	Channel flow – inclined pipes	13
1.4	Heated channels	20
1.5	Porous media	21
1.6	Particles in film boiling	22
1.7	Rod bundles	23
	Nomenclature	25
	References	28
<b>2</b>	<b>Drag, lift and virtual mass forces</b>	<b>31</b>
2.1	Drag forces	31
2.1.1	Introduction	31
2.1.2	Drag coefficient for single bubble	32
2.1.3	Family of particles in continuum	35
2.1.4	Droplets-gas	39
2.1.5	Solid particles-gas in presence of liquid. Solid particles-liquid in presence of a gas	40
2.1.6	Annular flow	50
2.1.7	Inverted annular flow	59
2.1.8	Stratified flow in horizontal or inclined rectangular channels	60
2.1.9	Stratified flow in horizontal or inclined pipes	63
2.2	Lift force	68
2.3	Virtual mass force	72

Nomenclature.....	75
References .....	78
<b>3 Friction pressure drop .....</b>	<b>83</b>
3.1 Introduction.....	83
3.2 Single-phase flow.....	83
3.2.1 Circular pipes .....	83
3.2.2 Annular channels.....	86
3.2.3 Arbitrary channel form.....	86
3.2.4 Axial flow in rod bundles.....	87
3.2.5 Cross flow in rod bundles.....	91
3.2.6 Pressure drop at spacer for bundles of nuclear reactors .....	93
3.3 Two-phase flow.....	95
3.4 Heated channels .....	100
3.5 Three-phase flow.....	102
Nomenclature .....	105
References .....	106
<b>4 Diffusion velocities for algebraic slip models .....</b>	<b>109</b>
4.1 Introduction.....	109
4.2 Drag as a function of the relative velocity .....	110
4.2.1 Wall force not taken into account.....	110
4.2.2 Wall forces taken into account .....	114
4.3 Two velocity fields.....	115
4.3.1 Single bubble terminal velocity.....	115
4.3.2 Single particle terminal velocity.....	118
4.3.3 Cross section averaged bubble rise velocity in pipes – drift flux models.....	119
4.3.4 Cross section averaged particle sink velocity in pipes – drift flux models.....	136
4.4 Slip models.....	138
4.5 Three velocity fields – annular dispersed flow .....	140
4.6 Three-phase flow.....	141
Nomenclature.....	144
References .....	146
<b>5 Entrainment in annular two-phase flow.....</b>	<b>149</b>
5.1 Introduction.....	149
5.2 Some basics.....	150
5.3 Correlations.....	151
5.4 Entrainment increase in boiling channels.....	159
5.5 Residual film thickness at DO?.....	160
5.6 Entrainment increase due to obstacles .....	161
5.7 Size of the entrained droplets.....	161

Nomenclature .....	162
References .....	165
<b>6 Deposition in annular two-phase flow .....</b>	<b>169</b>
6.1 Introduction .....	169
6.2 Analogy between heat and mass transfer .....	169
6.3 Fluctuation mechanism in the boundary layer.....	171
6.4 <i>Zaichik's</i> theory .....	176
6.5 Deposition correlations .....	176
6.6 Leidenfrost heat transfer to droplet bouncing hot wall.....	180
Nomenclature .....	180
References .....	184
<b>7 Introduction to fragmentation and coalescence .....</b>	<b>187</b>
7.1 Introduction .....	187
7.2 General remarks about fragmentation .....	189
7.3 General remarks about coalescence.....	191
7.3.1 Converging disperse field.....	191
7.3.2 Analogy to the molecular kinetic theory .....	192
7.4 Superposition of different droplet coalescence mechanisms.....	196
7.5 Superposition of different bubble coalescence mechanisms .....	197
7.6 General remarks about particle size formation in pipes .....	198
Nomenclature .....	201
References .....	204
<b>8 Acceleration induced droplet and bubble fragmentation.....</b>	<b>207</b>
8.1 Critical <i>Weber</i> number .....	207
8.2 Fragmentation modes .....	216
8.3 Relative velocity after fragmentation .....	219
8.4 Breakup time .....	222
8.5 Particle production rate correlations.....	229
8.5.1 Vibration breakup.....	229
8.5.2 Bag breakup.....	229
8.5.3 Bag and stamen breakup.....	231
8.5.4 Sheet stripping and wave crest stripping following by catastrophic breakup .....	231
8.6 Droplets production due to highly energetic collisions .....	238
8.7 Acceleration induced bubble fragmentation .....	240
Nomenclature.....	243
References.....	245
<b>9 Turbulence induced particle fragmentation and coalescence .....</b>	<b>249</b>
9.1 Homogeneous turbulence characteristics .....	249
9.2 Reaction of a particle to the acceleration of the surrounding continuum.....	253

9.3	Reaction of particle entrained inside the turbulent vortex – inertial range.....	254
9.4	Stability criterion for bubbles in continuum.....	255
9.5	Turbulence energy dissipation due to the wall friction .....	259
9.6	Turbulence energy dissipation due to the relative motion.....	261
9.7	Bubble coalescence probability.....	262
9.8	Coalescence probability of small droplets.....	266
	Nomenclature .....	268
	References .....	270
<b>10</b>	<b>Liquid and gas jet disintegration.....</b>	<b>273</b>
10.1	Liquid jet disintegration in pools .....	273
10.2	Boundary of different fragmentation mechanisms .....	275
10.3	Size of the ligaments .....	277
10.4	Unbounded instability controlling jet fragmentation .....	278
10.4.1	No ambient influence .....	278
10.4.2	Ambient influence .....	280
10.4.3	Jets producing film boiling in the ambient liquid.....	282
10.4.4	An alternative approach .....	284
10.4.5	Jets penetrating two-phase mixtures.....	285
10.4.6	Particle production rate .....	285
10.5	Jet erosion by high velocity gas environment .....	285
10.6	Jet fragmentation in pipes .....	287
10.7	Liquid spray produced in nozzles .....	289
10.8	Gas jet disintegration in pools.....	289
	Nomenclature .....	292
	References .....	295
<b>11</b>	<b>Fragmentation of melt in coolant.....</b>	<b>297</b>
11.1	Introduction.....	297
11.2	Vapor thickness in film boiling.....	299
11.3	Amount of melt surrounded by continuous water .....	300
11.4	Thermo-mechanical fragmentation of liquid metal in water .....	301
11.4.1	External triggers.....	302
11.4.2	Experimental observations.....	307
11.4.3	The mechanism of the thermal fragmentation .....	312
11.5	Particle production rate during the thermal fragmentation.....	326
11.6	<i>Tang's</i> thermal fragmentation model .....	328
11.7	<i>Yuen's</i> thermal fragmentation model .....	330
11.8	Oxidation.....	331
11.9	Superposition of thermal fragmentation.....	332
11.9.1	Inert gases.....	332
11.9.2	Coolant viscosity increase .....	332
11.9.3	Surfactants.....	333
11.9.4	Melt viscosity .....	334

Nomenclature .....	334
References .....	337
<b>12 Nucleation in liquids .....</b>	<b>343</b>
12.1 Introduction .....	343
12.2 Nucleation energy, equation of <i>Kelvin</i> and <i>Laplace</i> .....	344
12.3 Nucleus capable to grow .....	345
12.4 Some useful forms of the <i>Clausius-Clapeyron</i> equation, measures of superheating .....	347
12.5 Nucleation kinetics .....	350
12.5.1 Homogeneous nucleation .....	350
12.5.2 Heterogeneous nucleation .....	351
12.6 Maximum superheat.....	357
12.7 Critical mass flow rate in short pipes, orifices and nozzles.....	360
12.8 Nucleation in the presence of non-condensable gases.....	361
12.9 Activated nucleation site density – state of the art .....	362
12.10 Conclusions and recommendations .....	368
Nomenclature .....	368
References .....	370
<b>13 Bubble growth in superheated liquid .....</b>	<b>375</b>
13.1 Introduction .....	375
13.2 The thermally controlled bubble growth .....	376
13.3 The <i>Mikic</i> solution.....	378
13.4 How to compute the mass source terms for the averaged conservation equations? .....	381
13.4.1 Non-averaged mass source terms .....	381
13.4.2 The averaged mass source terms .....	382
13.5 Superheated steam.....	384
13.6 Diffusion controlled evaporation into mixture of gases inside the bubble .....	385
13.7 Conclusions .....	386
Appendix 13.1 Radius of a single bubble in a superheated liquid as a function of time .....	386
Nomenclature .....	391
References .....	394
<b>14 Condensation of a pure steam bubble in a subcooled liquid .....</b>	<b>397</b>
14.1 Introduction .....	397
14.2 Stagnant bubble.....	397
14.3 Moving bubble .....	399
14.4 Non-averaged source terms .....	404
14.5 Averaged source terms .....	405
14.6 Change of the bubble number density due to condensation .....	406
14.7 Pure steam bubble drifting in turbulent continuous liquid .....	407

14.8	Condensation from a gas mixture in bubbles surrounded by subcooled liquid .....	409
14.8.1	Thermally controlled collapse .....	410
14.8.2	Diffusion controlled collapse .....	410
	Nomenclature .....	411
	References .....	415
<b>15</b>	<b>Bubble departure diameter.....</b>	<b>417</b>
15.1	How accurately can we predict bubble departure diameter for boiling? .....	417
15.2	Model development.....	420
15.3	Comparison with experimental data.....	425
15.4	Significance.....	429
15.5	Summary and conclusions.....	429
15.6	Extension of the theory to sub-cooled liquids .....	430
15.7	Influence of the wall material.....	433
	Nomenclature.....	434
	References .....	435
<b>16</b>	<b>How accurately can we predict nucleate boiling? .....</b>	<b>439</b>
16.1	Introduction.....	439
16.2	New phenomenological model for nucleate pool boiling.....	446
16.2.1	Basic assumptions .....	446
16.2.2	Proposed model.....	448
16.3	Data comparison.....	450
16.3.1	Nucleation site density at high pressures.....	453
16.4	Systematic inspection of all the used hypotheses.....	455
16.5	Significance.....	456
16.6	Conclusions.....	456
16.7	Extension to forced convection with nucleate boiling .....	457
	Appendix 16.1 State of the art of nucleate pool boiling modeling.....	460
	Nomenclature .....	465
	References .....	467
<b>17</b>	<b>Heterogeneous nucleation and flashing in adiabatic pipes.....</b>	<b>471</b>
17.1	Introduction.....	471
17.2	Bubbles generated due to nucleation at the wall .....	472
17.3	Bubble growth in the bulk.....	473
17.4	Bubble fragmentation and coalescence .....	473
17.5	Film flashing bubble generation in adiabatic pipe flow .....	475
17.6	Verification of the model .....	476
17.9	Significance and conclusions .....	481
	Nomenclature .....	482
	References .....	484

<b>18 Boiling of subcooled liquid .....</b>	<b>487</b>
18.1 Introduction .....	487
18.2 Initiation of visible boiling on the heated surface .....	487
18.3 Local evaporation and condensation .....	490
18.3.1 Relaxation theory .....	490
18.3.2 Boundary layer treatment .....	492
Nomenclature .....	495
References .....	496
<b>19 Natural convection film boiling .....</b>	<b>499</b>
19.1 Minimum film boiling temperature .....	499
19.2 Film boiling in horizontal upwards-oriented plates.....	500
19.3 Horizontal cylinder.....	501
19.4 Sphere.....	502
Nomenclature .....	502
References .....	504
<b>20 Forced convection boiling .....</b>	<b>505</b>
20.1 Convective boiling of saturated liquid .....	505
20.2 Forced convection film boiling .....	507
20.2.1 Tubes .....	507
20.2.2 Annular channel .....	509
20.2.3 Tubes and annular channels.....	510
20.2.4 Vertical flow around rod bundles .....	510
20.3 Transition boiling .....	511
20.4 Critical heat flux.....	512
20.4.1 The hydrodynamic stability theory of free convection DNB .....	513
20.4.2 Forced convection DNB and DO correlations.....	515
20.4.3 The 1995 and 2005 look-up tables .....	519
Nomenclature .....	524
References .....	526
<b>21 Film boiling on vertical plates and spheres .....</b>	<b>529</b>
21.1 Plate.....	529
21.1.1 Introduction .....	529
21.1.2 State of the art.....	530
21.1.3 Problem definition.....	531
21.1.4 Simplifying assumptions .....	532
21.1.5 Energy balance at the vapor-liquid interface, vapor film thickness, average heat transfer coefficient .....	535
21.1.6 Energy balance of the liquid boundary layer, layer thickness ratio.....	538
21.1.7 Averaged heat fluxes .....	541
21.1.8 Effect of the interfacial disturbances .....	542
21.1.9 Comparison of the theory with the results of other authors.....	543

---

21.1.10	Verification using the experimental data.....	545
21.1.11	Conclusions .....	546
21.1.12	Practical significance.....	546
21.2	Sphere .....	547
21.2.1	Introduction .....	547
21.2.2	Problem definition.....	547
21.2.3	Solution method .....	547
21.2.4	Model .....	547
21.2.5	Data comparison.....	556
21.2.6	Conclusions .....	559
Appendix 21.1	Natural convection at vertical plate .....	559
Appendix 21.2	Predominant forced convection only at vertical plate.....	560
	Nomenclature .....	561
	References .....	564
