1	Introduction	1
2	Point Defects in LiNbO₃	9
2.1	Intrinsic Defect Structure of LiNbO ₃	10
2.2	Point Defects Induced in LiNbO ₃ by a Reduction Treatment and the Polaron Model	14
2.3	Hydrogen in the LiNbO ₃ Lattice	24
2.4	Photorefractive and Relative Impurity Ions in the LiNbO ₃ Lattice.....	27
2.5	Optical-Damage-Resistant (Non-Photorefractive) Impurity Ions in the LiNbO ₃ Lattice and Their Impact on the Incorporation of Other Impurity Ions	34
2.5.1	Incorporation of the Optical-Damage-Resistant Ions into the Lattice	34
2.5.2	Effect of Optical-Damage-Resistant Impurities on the Incorporation of Other Impurity Ions	44
2.5.3	OH-Spectra in Optical-Damage-Resistant LiNbO ₃ Crystals	48
3	General Introduction to Photorefraction in LiNbO₃	51
3.1	Background with Basic Relations	52
3.2	Photoinduced Charge Transport in LiNbO ₃ Crystals	58
3.2.1	Dark Conductivity in LiNbO ₃	59
3.2.2	One-Center Charge Transport Scheme in LiNbO ₃	62
3.2.3	Two-Center Charge Transport Scheme in LiNbO ₃ : The Intrinsic Defects as <i>Secondary</i> Electron Traps	68
4	Photorefraction in LiNbO₃ Crystals with Different Stoichiometry and/or Doped with Optical-Damage-Resistant Impurities	75
4.1	Photorefractive Properties of Near-Stoichiometric LiNbO ₃ Crystals	76

VIII Contents

4.2	Photorefraction in LiNbO ₃ Crystals Doped with Optical-Damage-Resistant Ions	82
4.2.1	Photorefractive Properties of Optical-Damage-Resistant Compositions	82
4.2.2	Fundamental Changes of the Charge Transport Process Produced by ODRI in LiNbO ₃ : Charge Transport Process in LiNbO ₃ Crystals Doped with ODRI	85
4.2.3	Dark-Trace and GRIIRA (BLIIRA) Effects in Optical-Damage-Resistant LiNbO ₃ Crystals	94
4.2.4	LiNbO ₃ with Optical-Damage-Resistant Impurities as Media for the Photorefractive Recording	97
5	Problem of a Non-Erasable Photorefractive Hologram	103
5.1	Two-Color Holography	104
5.1.1	Principles of the Two-Color Holography	104
5.1.2	Two-Step Recording via Short-Living Centers (Gating Process)	106
5.1.3	Two-Color Recording in Doubly-Doped Crystals	114
5.2	Thermal Hologram Fixation	117
5.2.1	Basics and the Theoretical Approach of Thermal Fixing	118
5.2.2	Experimental Studies in the Thermal Fixing	127
5.2.3	Thermal Fixing of Holograms in Other Photorefractive Materials	132
5.2.4	Attempts of Practical Applications of Thermal Hologram Fixing in LiNbO ₃	135
5.2.5	Conclusions for Thermal Hologram Fixation	137
6	Properties to Characterize Undoped and Optical-Damage-Resistant LiNbO₃ Crystals	139
6.1	Methods to Measure the Composition and Homogeneity of Crystals	139
6.1.1	Melt Composition and Curie Temperature	140
6.1.2	UV Absorption Edge	142
6.1.3	Homogeneity	143
6.2	Refractive Indices and Birefringence: A Generalized Sellmeier Equation	143
6.3	Phase-Matching Temperature and Angle	148
6.4	Electro-Optic Properties	150
7	Polarization Reversal and Ferroelectric Domains in LiNbO₃ Crystals	153
7.1	Classical Description of the Ferroelectric Switching	153
7.1.1	Phenomenological Description	154

7.1.2	Model Description of the Domain Dynamics and Ferroelectric Switching	161
7.1.3	Experimental Methods for Domain Studies and Polarization Kinetics	167
7.1.4	Background of the Optical Frequency Conversion in the Quasi-phasematching (QPM) Regime	173
7.2	Ferroelectric Switching of LiNbO ₃ and LiTaO ₃ Crystals	176
7.2.1	First Steps of Regular Domain Pattern Creation in LiNbO ₃ and LiTaO ₃ Crystals	177
7.2.2	Fundamental Role of the Composition in Ferroelectric Switching	181
7.2.3	Photoinduced Effects in Ferroelectric Switching of LiNbO ₃ and LiTaO ₃ (Photodomain Effects)	197
7.2.4	Recording of Ferroelectric Domains by Electron Beams and AFM Voltages: Microstructured Domain Patterns	200
7.2.5	Conclusion	209
