1	Introduction	1
2	The Finite Element (FE) Method	7
2.1	Finite Element Formulation	9
2.2	Finite Element Method for a 1D Problem	13
2.3	Nodal (Lagrangian) Finite Elements	20
2.3.1	Basic Properties	21
2.3.2	Quadrilateral Element in \mathbb{R}^2	23
2.3.3	Triangular Element in \mathbb{R}^2	26
2.3.4	Tetrahedron Element in \mathbb{R}^3	26
2.3.5	Hexahedron Element in \mathbb{R}^3	27
2.3.6	Global/Local Derivatives	29
2.3.7	Numerical Integration	30
2.4	Finite Element Procedure	32
2.5	Time Discretization	35
2.5.1	Parabolic Differential Equation	36
2.5.2	Hyperbolic Differential Equation	40
2.6	Integration over Surfaces	43
2.7	Edge (Nédélec) Finite Elements	43
2.8	Discretization Error	45
3	Mechanical Field	51
3.1	Navier's Equation	51
3.2	Deformation and Displacement Gradient	55
3.3	Mechanical Strain	56
3.4	Constitutive Equations	60
3.4.1	Plane Strain State	61
3.4.2	Plane Stress State	62
3.4.3	Axisymmetric Stress–Strain Relations	63
3.5	Waves in Solid Bodies	63
3.6	Material Properties	65

3.7	Numerical Computation	66
3.7.1	Linear Elasticity	66
3.7.2	Damping Model	69
3.7.3	Geometric Non-linear Case	70
3.7.4	Numerical Example	77
3.8	Locking and Efficient Solution Approaches	78
3.8.1	Incompatible Modes Method	81
3.8.2	Enhanced Assumed Strain Method	83
3.8.3	Balanced Reduced and Selective Integration	85
4	Electromagnetic Field	93
4.1	Maxwell's Equations	93
4.2	Quasistatic Electromagnetic Fields	101
4.2.1	Magnetic Vector Potential	101
4.2.2	Skin Effect	102
4.3	Electrostatic Field	104
4.4	Material Properties	104
4.4.1	Magnetic Permeability	104
4.4.2	Electrical Conductivity	108
4.4.3	Dielectric Permittivity	108
4.5	Electromagnetic Interface Conditions	109
4.5.1	Continuity Relations for Magnetic Field	109
4.5.2	Continuity Relations for Electric Field	111
4.5.3	Continuity Relations for Electric Current Density	113
4.6	Numerical Computation: Electrostatics	113
4.7	Numerical Computation: Electromagnetics	114
4.7.1	Formulation	114
4.7.2	Discretization with Edge Elements	121
4.7.3	Discretization with Nodal Finite Elements	122
4.7.4	Newton's Method for the Non-linear Case	125
4.7.5	Approximation of B - H Curve	129
4.7.6	Modelling of Current-loaded Coil	131
4.7.7	Computation of Global Quantities	131
4.7.8	Induced Electric Voltage	134
4.8	Numerical Examples	135
4.8.1	Ferromagnetic Cube	135
4.8.2	Thin Iron Plate	136
5	Acoustic Field	139
5.1	Wave Theory of Sound	139
5.1.1	Conservation of Mass (Continuity Equation)	140
5.1.2	Conservation of Momentum (Euler Equation)	141
5.1.3	Pressure-Density Relation (State Equation)	143
5.1.4	Linear Acoustic Wave Equation	145
5.1.5	Acoustic Quantities	146

5.1.6	Plane and Spherical Waves	148
5.2	Quantitative Measure of Sound	151
5.3	Non-linear Acoustic Wave Equation	156
5.4	Numerical Computation	160
5.4.1	Linear Acoustics	161
5.4.2	Non-linear Acoustics	163
5.4.3	Non-matching Grids	166
5.4.4	Discretization Error	170
5.5	Treatment of Open Domain Problems	173
5.5.1	Absorbing Boundary Conditions	175
5.5.2	Perfectly Matched Layer (PML) Technique	176
5.6	Numerical Examples	184
5.6.1	Transient Wave Propagation in Unbounded Domain ...	184
5.6.2	Harmonic Wave Propagation in Unbounded Domain ...	186
5.6.3	Acoustic Pulse Propagation over a Non-Matching Grid .	188
5.6.4	Non-linear Wave Propagation in a Channel	190
6	Coupled Electrostatic-Mechanical Systems	195
6.1	Electrostatic Force	196
6.2	Numerical Computation	202
6.2.1	Calculation Scheme	202
6.2.2	Voltage-driven Bar	205
7	Coupled Magnetomechanical Systems	207
7.1	General Moving/Deforming Body	207
7.2	Electromagnetic Force	209
7.3	Numerical Computation	211
7.3.1	Electric Circuit Coupling: Voltage-loaded Coil	211
7.3.2	Force Computation via the Principle of Virtual Work ..	213
7.3.3	Calculation Scheme	216
7.3.4	Moving Current/Voltage-loaded Coil	218
8	Coupled Mechanical-Acoustic Systems	229
8.1	Solid-Fluid Interface	230
8.2	Coupled Field Formulation	231
8.3	Numerical Computation	233
8.3.1	Finite Element Formulation	233
8.3.2	Non-matching Grids	234
8.3.3	Numerical Examples	235
9	Piezoelectric Systems	243
9.1	Constitutive Equation	243
9.2	Governing Equations	244
9.3	Piezoelectric Material Properties	245
9.4	Models for Non-linear Piezoelectricity	249

9.5	Hysteresis Model	253
9.6	Numerical Computation	257
9.6.1	Linear Case	257
9.6.2	Non-linear Case	259
9.7	Numerical Examples	261
9.7.1	Computation of Impedance Curve	261
9.7.2	Non-linear Case	264
10	Computational Aeroacoustics	267
10.1	Requirements for Numerical Schemes	267
10.2	Lighthill's Analogy and its Extension	270
10.3	Finite Element Formulation	275
10.4	Validation: Co-Rotating Vortex Pair	279
11	Algebraic Solvers	283
11.1	Preconditioned Conjugate Gradient (PCG) Method	283
11.2	Multigrid (MG) Method	285
11.3	Geometric MG Method	287
11.3.1	Geometric MG for Edge Elements	288
11.3.2	Case Study	290
11.4	Algebraic MG Method	293
11.4.1	Auxiliary Matrix	294
11.4.2	Coarsening Process	295
11.4.3	Prolongation Operators	298
11.4.4	Smoother and Coarse-grid Operator	299
11.4.5	AMG for Nodal Elements	300
11.4.6	AMG for Edge Elements	301
11.4.7	AMG for Time-harmonic Case	304
11.4.8	Case Studies	304
12	Industrial Applications	313
12.1	Electrodynamic Loudspeaker	313
12.1.1	Finite Element Models	314
12.1.2	Verification of Computer Models	316
12.1.3	Numerical Analysis of the Non-linear Loudspeaker Behavior	317
12.1.4	Computer Optimization of the Non-linear Loudspeaker Behavior	320
12.2	Noise Computation of Power Transformers	320
12.2.1	Finite Element Models	321
12.2.2	Verification of the Computer Models	325
12.2.3	Verification of the Calculated Winding and Tank-surface Vibrations	326
12.2.4	Verification of the Sound-field Calculations	328
12.2.5	Influence of Tap-changer Position	328

12.2.6	Influence of Stiffness of Winding Supports	330
12.3	Fast-switching Electromagnetic Valves	330
12.3.1	Modelling and Solution Strategy	331
12.3.2	Actuator Characteristics	333
12.3.3	Actuator Dynamics	335
12.3.4	Dynamics Optimization I: Electrical Premagnetization	336
12.3.5	Dynamics Optimization II: Overexcitation	337
12.3.6	Switching Cycle	337
12.4	Cofired Piezoceramic Multilayer Actuators	340
12.4.1	Setup of Multilayer Stack Actuators	341
12.4.2	Finite Element Model	342
12.4.3	Measured and Simulated Results	343
12.5	Capacitive Micromachined Ultrasound Transducers	345
12.5.1	Requirements to Numerical Simulation Scheme	346
12.5.2	Single CMUT Cell	348
12.5.3	CMUT Array	350
12.5.4	Controlled CMUT Array	352
12.6	High-Intensity Focused Ultrasound	357
12.6.1	Piezoelectric Transducer and Input Impedance	357
12.6.2	Pressure Pulse Computation	357
12.6.3	High-Power Pulse Sources for Lithotripsy	361
12.7	Noise Generated from a Flow around a Square Cylinder	366
12.7.1	3D Flow and 2D Acoustic Computations	366
12.7.2	3D Flow and 3D Acoustic Computations	377
A	Norms	381
A.1	Vector Norms	381
A.2	Matrix Norms	382
B	Scalar and Vector Fields	383
B.1	The Nabla (∇) Operator	386
B.2	Definition of Gradient, Divergence, and Curl	386
B.3	The Gradient	387
B.4	The Flux	389
B.5	Divergence	390
B.6	Divergence Theorem (Gauss Theorem)	392
B.7	The Circulation	392
B.8	The Curl	393
B.9	Stoke's Theorem	395
B.10	Green's Integral Theorems	396
B.11	Application of the Operators	397
B.12	Irrotational Vector Fields	397
B.13	Solenoidal Vector Fields	398
C	Appropriate Function Spaces	399
