## Part I Mono-Functional Barrier Effects - Review

---

### 1 The Application of Fire-Retardant Fillers for Use in Textile Barrier Materials

<i>P.R. Hornsby</i> .....	3
1.1 Introduction .....	3
1.2 Fire-Retardant Fillers and Limitations for Textile Use .....	3
1.3 Mechanism and Application of Conventional Fire-Retardant Fillers .....	5
1.3.1 Scope of Application.....	5
1.3.2 Flame Retardancy .....	6
1.3.3 Smoke Suppression .....	10
1.3.4 Synergism .....	11
1.4 Nano-Size Fire-Retardant Fillers .....	14
1.5 Conclusions .....	19
References .....	19

### 2 Antimicrobial Functionalisation of Textile Materials

<i>E. Heime, H.G. Knops, K. Schaefer, P. Vangeyte, and M. Moeller</i> .....	23
2.1 Introduction .....	24
2.2 Functionalisation of Fibre Material by Application of Effective Substances .....	24
2.2.1 Antimicrobial Finishing .....	24
2.2.2 Medical Textiles .....	24
2.2.3 Functionalised Fibres: Application of Effective Agents During Melt Spinning.....	25
2.2.4 Use of Silver as an Antimicrobial Agent in Textile Functionalisation .....	26
2.2.5 Requirements for Antimicrobial Agents on Textiles .....	26
2.2.6 Antimicrobial Effect .....	27

2.3	Testing.....	27
2.4	Micro-Encapsulation of Antimicrobial Agents for Hygienic Functionalisation of Textiles .....	27
2.5	Antimicrobial Peptides .....	29
2.6	Antimicrobial Polymers .....	29
	2.6.1 Antimicrobial Finishing Methodologies .....	30
	2.6.2 Antimicrobial Polymers and Their Effect .....	31
2.7	Chitin and Chitosan Derivatives as Antimicrobial Agents .....	34
	2.7.1 Synthesis of Chitin Derivatives as Antimicrobial Agents for Textiles .....	35
2.8	Applications .....	36
2.9	Future Prospects .....	37
	References .....	37

**3 Intumescent Flame-Retardant Treatments  
for Flexible Barriers**

	<i>R. Kozlowski, D. Wesolek, M. Wladyka-Przybylak, S. Duquesne, A. Vannier, S. Bourbigot, and R. Delobel</i> .....	39
3.1	Introduction .....	39
3.2	Mechanisms of Intumescence .....	41
3.3	Flame-Retarded Natural Fibers .....	43
	3.3.1 Cotton .....	43
3.4	Flame-Retarded Synthetic Fibers .....	51
	3.4.1 Poly(Ethylene Terephthalate) .....	51
	3.4.2 Polypropylene .....	53
	3.4.3 Polyamide .....	57
3.5	Conclusion .....	58
	References .....	59

**4 Protection Against Electrostatic  
and Electromagnetic Phenomena**

	<i>S. Nurmi, T. Hammi, and B. Demoulin</i> .....	63
4.1	Protection Against Electrostatic Phenomena .....	63
	4.1.1 Static Electricity .....	63
	4.1.2 Fundamental Principles of Electrostatics .....	64
	4.1.3 Electrostatic Charging and Textile Type Materials .....	67
	4.1.4 Charging Mechanisms in Textiles .....	68
	4.1.5 Charge Dissipation Mechanisms of Textiles .....	69
	4.1.6 Electrostatic Control Fabrics and Garments .....	71
	4.1.7 Review of Techniques on Fibrous Materials for Protection Against Electrostatic Discharge .....	72
4.2	Protection Against Electromagnetic Phenomena .....	74
	4.2.1 Electromagnetic Compatibility .....	74
	4.2.2 Basic Electromagnetic Principles .....	75

4.2.3	Uniform Plane Waves .....	77
4.2.4	Electromagnetic Shielding .....	78
4.2.5	Flexible Electromagnetic Shields .....	81
References	.....	82

---

**Part II New Technologies for Barrier Effects**

---

**5 Fire-Retardant Mechanisms  
in Polymer Nano-Composite Materials**

<i>A. Castrovinci and G. Camino</i>	.....	87
5.1	Introduction .....	87
5.2	Overview of Commercially Available Nano-Fillers.....	88
5.2.1	Three Dimension Particles.....	88
5.2.2	Two Dimension Particles .....	89
5.2.3	One Dimension Particles .....	91
5.2.4	Synthetic 3D or 2D Nano-Fillers .....	93
5.3	Structure of Nano-Composites .....	93
5.4	Combustion Behaviour of Polymer Nano-Composites.....	95
5.5	Mechanism of Nano-Composites Combustion .....	97
5.5.1	Barrier Effect .....	97
5.5.2	Charring .....	101
5.6	Fire-Retardant Nano-Composites .....	103
5.7	Conclusions.....	105
References	.....	105

**6 Cold Plasma Technologies for Surface Modification  
and Thin Film Deposition**

<i>C. Jama and R. Delobel</i>	.....	109
6.1	Classification of Plasmas .....	109
6.2	Cold Plasma Technology .....	110
6.3	Applications of Cold Plasma Technology .....	112
6.3.1	Functionalisation of Organic and Inorganic Polymeric Surfaces.....	112
6.3.2	Plasma-Assisted Thin Films Deposition .....	113
6.4	Conclusions.....	121
References	.....	122

**7 Nano-Fibres for Filter Materials**

<i>K. Schaefer, H. Thomas, P. Dalton, and M. Moeller</i>	.....	125
7.1	Introduction .....	126
7.2	Principle of Electrospinning.....	127
7.2.1	Practical Electrospinning .....	129
7.2.2	Nano-Fibres Produced by Electrospinning form Polymer Solutions or Melts .....	130
7.2.3	Electrospraying .....	131

7.3 Application of Nano-Fibres  
or Nano-Webs as Filter Media ..... 134

7.4 New Developments in Electrospinning ..... 135

References ..... 136

**8 The Development of Non-Wovens**

*T. Le Blan, M. Vouters, C. Magniez, and X. Normand* ..... 139

8.1 Definition of Non-Wovens ..... 139

8.2 Raw Materials for Non-Wovens ..... 140

8.2.1 Fibres and Filaments ..... 140

8.2.2 Other Raw Materials ..... 142

8.3 Web-Forming Technologies ..... 142

8.3.1 Drylaid Technologies ..... 143

8.3.2 Spunlaid and Meltblown Technologies ..... 144

8.3.3 Other Technologies ..... 146

8.4 Bonding Technologies ..... 146

8.5 Web Conversion and Finishing ..... 148

8.6 Barrier Effect in Non-Wovens ..... 148

8.6.1 Regularity and Homogeneity of Materials ..... 149

8.6.2 Saving of Raw Materials  
with Equal or Superior Performances ..... 149

8.6.3 Functionalisation ..... 149

8.6.4 Characterisation/Standardisation ..... 149

8.6.5 Mechanical Performances ..... 150

8.6.6 Lifetime Improvement ..... 150

8.6.7 Comfort ..... 150

References ..... 150

**9 Mechanical Models and Actuation Technologies  
for Active Fabrics: A Brief Survey of the State of the Art**

*F. Carpi, M. Pucciani, and D. De Rossi* ..... 151

9.1 Introduction ..... 151

9.2 Knitted Fabrics ..... 152

9.3 Mechanical Behaviour of Weft-Knitted Fabrics ..... 153

9.3.1 Geometrical Identification of the Yarn Loop ..... 153

9.3.2 Rheological Models and Constituting Elements ..... 153

9.3.3 Potential Energy as an Approach  
to Describe Non-Linear Mechanical Properties  
of Fabrics ..... 156

9.4 Different Approaches to Describe the Mechanical Behaviour  
of Weft-Knitted Fabrics ..... 159

9.4.1 Load–Extension Behaviour of Weft-Knitted Fabrics ..... 159

9.4.2 A Theoretical Analysis Based on the Elastic Theory ..... 160

9.5 Woven Fabrics with Barrier Effect ..... 162

9.6	Technologies for Actuation of Fabrics .....	163
9.6.1	Shape Memory Alloys .....	164
9.6.2	Shape Memory Polymers .....	165
9.6.3	Future Developments .....	166
9.7	Conclusions .....	167
	References .....	168

---

**Part III Modelling**

---

**10 Pyrolysis Modelling Within CFD Codes**

	<i>P. Van Hees and J. Axelsson</i> .....	171
10.1	Introduction .....	171
10.2	Description of Model .....	172
10.3	Additional Changes or Additions in the Model .....	175
10.4	Sensitivity Analysis of the Physical Flame Spread Model .....	175
10.4.1	Influence of the Pyrolysis Temperature on the Results ...	175
10.4.2	Influence of Heat of Pyrolysis on the Results .....	176
10.4.3	Influence of the Heat of Combustion on the Results .....	176
10.4.4	Influence of the Char Density on the Results .....	178
10.4.5	Influence of the Specific Heat on the Results .....	178
10.4.6	Influence of the Thermal Conductivity on the Results ...	178
10.4.7	Influence of the Number of Iterations and Thickness of Numerical Strips on the Results .....	179
10.4.8	Influence of Ignition Temperature for Non-Charring Materials .....	180
10.4.9	Final Evaluation and Procedure to Define Material Parameters .....	182
10.5	Verification of the Physical Flame Spread .....	184
10.5.1	Verification with Cone Calorimeter Test Data .....	184
10.5.2	Verification with a Stand-Alone Flame Spread Model ...	186
10.6	Conclusion .....	189
	References .....	189

**11 Life-Cycle Assessment Including Fires (Fire-LCA)**

	<i>P. Andersson, M. Simonson, and H. Stripple</i> .....	191
11.1	Introduction .....	191
11.2	Life-Cycle Assessment: The Basic Concept .....	192
11.3	Methodology: An Overview .....	195
11.3.1	The Risk Assessment Approach .....	196
11.3.2	The Fire-LCA System Description .....	196
11.4	Fire-LCA Guidelines .....	198
11.4.1	Goal and Scope .....	198
11.4.2	Special Fire Considerations .....	201

XIV Contents

11.4.3	Statistical Fire Model . . . . .	202
11.4.4	Replacement of Burned Materials . . . . .	204
11.4.5	Data Inventory . . . . .	205
11.4.6	Competences Needed to Conduct a Fire-LCA Analysis . . . . .	208
11.5	Evaluation of Results . . . . .	208
11.6	Computer Modelling Methods . . . . .	210
11.7	Simplified Approach . . . . .	210
11.7.1	Background Minimisation . . . . .	211
11.7.2	Parameter Minimisation . . . . .	211
11.7.3	Scenario Minimisation . . . . .	211
11.8	Limitations . . . . .	212
11.9	Conclusions . . . . .	212
	References . . . . .	212

**12 Modelling of Euroclass Test Results by Means of the Cone Calorimeter**

	<i>P. Van Hees and J. Axelsson</i> . . . . .	215
12.1	Description of Model . . . . .	215
12.1.1	Principles of Prediction Model . . . . .	216
12.1.2	Burning Area Growth Rate . . . . .	216
12.1.3	Criteria for Flame Spread . . . . .	218
12.1.4	Calculation of Heat Release Rate . . . . .	219
12.1.5	Correction for Cone Calorimeter Data Obtained at Other Heat Flux Levels . . . . .	219
12.2	Sensitivity Study of Model . . . . .	220
12.2.1	Influence of HRR Threshold and Ignition Time . . . . .	220
12.2.2	Influence of Backing Board . . . . .	221
12.2.3	Shiny Materials . . . . .	221
12.3	Guidance and Description Testing Protocol . . . . .	222
12.4	Comparison and Discussion of Simulation Results . . . . .	224
12.5	Conclusions . . . . .	226
	References . . . . .	226

---

**Part IV Applications of Multifunctional Barriers**

---

**13 Characterisation of Barrier Effects in Footwear**

	<i>R.M. Silva, V.V. Pinto, F. Freitas, and M.J. Ferreira</i> . . . . .	229
13.1	Introduction . . . . .	229
13.2	Upper Part: Leather . . . . .	231
13.2.1	Leather Tanning . . . . .	232
13.2.2	Water Resistance Barrier Effect . . . . .	232
13.2.3	Flame Resistance Barrier Effect . . . . .	236
13.2.4	Micro-Organisms Resistance Barrier Effect . . . . .	244

13.3	Rubber Outsoles .....	247
13.3.1	Flame Resistance .....	247
13.3.2	Test Methods .....	248
13.4	Complete Footwear .....	254
13.4.1	Water Resistance Barrier Effect .....	254
13.4.2	Flame Resistance .....	259
13.4.3	Thermal Resistance Barrier Effect .....	259
13.4.4	Chemical and Micro-Organism Resistance Barrier Effect .....	262
13.4.5	Other .....	265
	References .....	265
<b>14 Filtration Technologies in the Automotive Industry</b>		
<i>E. Jandos, M. Lebrun, C. Brzezinski, and S. Capo Canizares</i> .....		
14.1	Basic Filtration Principles .....	269
14.1.1	What is Filtration? .....	269
14.1.2	Characteristics of Contaminant Particles .....	269
14.1.3	Mechanisms of Capture .....	272
14.2	Filtration Technologies .....	276
14.2.1	Engine Air Intake Filters .....	276
14.2.2	Technical Features of a Fibrous Medium .....	280
14.2.3	Filtration Process .....	281
14.2.4	Filtration Efficiency .....	283
14.3	Test Methodologies: Standards and Benches .....	285
14.3.1	Requirements of Air Filter Media .....	285
14.3.2	Material Related Parameters .....	285
14.3.3	Filter Parameters .....	285
14.4	Conclusion .....	288
	References .....	288
	<b>Index</b> .....	289
