Contents

1 Second Quantisation **1**
1.1 Identical Particles 2
1.2 The “Continuous” Fock Representation 8
1.3 The “Discrete” Fock Representation 21
1.4 Exercises 28
1.5 Self-Examination Questions 34

2 Many-Body Model Systems **37**
2.1 Crystal Electrons 39
2.1.1 Non-interacting Bloch Electrons 39
2.1.2 The Jellium Model 44
2.1.3 The Hubbard Model 55
2.1.4 Exercises 59
2.2 Lattice Vibrations 64
2.2.1 The Harmonic Approximation 64
2.2.2 The Phonon Gas 69
2.2.3 Exercises 74
2.3 The Electron-Phonon Interaction 76
2.3.1 The Hamiltonian 76
2.3.2 The Effective Electron-Electron Interaction 81
2.3.3 Exercises 84
2.4 Spin Waves 88
2.4.1 Classification of Magnetic Solids 88
2.4.2 Model Concepts 90
2.4.3 Magnons 93
2.4.4 The Spin-Wave Approximation 98
2.4.5 Exercises 99
2.5 Self-Examination Questions 103

3 Green’s Functions **107**
3.1 Preliminary Considerations 107
3.1.1 Representations 107

3.1.2 Linear-Response Theory . . . 114
3.1.3 The Magnetic Susceptibility . . . 117
3.1.4 The Electrical Conductivity . . . 119
3.1.5 The Dielectric Function . . . 122
3.1.6 Spectroscopies, Spectral Density . . . 124
3.1.7 Exercises . . . 129
3.2 Double-Time Green's Functions . . . 132
3.2.1 Equations of Motion . . . 132
3.2.2 Spectral Representations . . . 136
3.2.3 The Spectral Theorem . . . 141
3.2.4 Exact Expressions . . . 144
3.2.5 The Kramers-Kronig Relations . . . 147
3.2.6 Exercises . . . 149
3.3 First Applications . . . 152
3.3.1 Non-Interacting Bloch Electrons . . . 152
3.3.2 Free Spin Waves . . . 158
3.3.3 The Two-Spin Problem . . . 160
3.3.4 Exercises . . . 171
3.4 The Quasi-Particle Concept . . . 174
3.4.1 One-Electron Green's Functions . . . 175
3.4.2 The Electronic Self-Energy . . . 177
3.4.3 Quasi-Particles . . . 182
3.4.4 Quasi-Particle Density of States . . . 187
3.4.5 Internal Energy . . . 189
3.4.6 Exercises . . . 191
3.5 Self-Examination Questions . . . 193

4 Systems of Interacting Particles . . . 197
4.1 Electrons in Solids . . . 197
4.1.1 The Limiting Case of an Infinitely Narrow Band . . . 197
4.1.2 The Hartree-Fock Approximation . . . 201
4.1.3 Electronic Correlations . . . 206
4.1.4 The Interpolation Method . . . 209
4.1.5 The Method of Moments . . . 210
4.1.6 The Exactly Half-filled Band . . . 219
4.1.7 Exercises . . . 224
4.2 Collective Electronic Excitations . . . 228
4.2.1 Charge Screening (Thomas-Fermi Approximation) . . . 229
4.2.2 Charge Density Waves, Plasmons . . . 233
4.2.3 Spin Density Waves, Magnons . . . 243
4.2.4 Exercises . . . 246
4.3 Elementary Excitations in Disordered Alloys . . . 250
4.3.1 Formulation of the Problem . . . 250
4.3.2 The Effective-Medium Method . . . 254
4.3.3 The Coherent Potential Approximation . . . 255

4.3.4 Diagrammatic Methods . . . 260
4.3.5 Applications . . . 270
4.4 Spin Systems . . . 271
4.4.1 The Tyablikow Approximation . . . 272
4.4.2 “Renormalised” Spin Waves . . . 279
4.4.3 Exercises . . . 284
4.5 The Electron-Magnon Interaction . . . 286
4.5.1 Magnetic 4f Systems (s-f-Model) . . . 286
4.5.2 The Infinitely Narrow Band . . . 288
4.5.3 The Alloy Analogy . . . 294
4.5.4 The Magnetic Polaron . . . 296
4.5.5 Exercises . . . 306
4.6 Self-Examination Questions . . . 308

5 Perturbation Theory (T = 0) . . . 313
5.1 Causal Green’s Functions . . . 313
5.1.1 “Conventional” Time-dependent Perturbation Theory . . . 313
5.1.2 “Switching on” the Interaction Adiabatically . . . 317
5.1.3 Causal Green’s Functions . . . 323
5.1.4 Exercises . . . 327
5.2 Wick’s Theorem . . . 328
5.2.1 The Normal Product . . . 328
5.2.2 Wick’s Theorem . . . 332
5.2.3 Exercises . . . 337
5.3 Feynman Diagrams . . . 337
5.3.1 Perturbation Expansion for the Vacuum Amplitude . . . 338
5.3.2 The Linked-Cluster Theorem . . . 346
5.3.3 The Principal Theorem of Connected Diagrams . . . 351
5.3.4 Exercises . . . 353
5.4 Single-Particle Green’s Functions . . . 354
5.4.1 Diagrammatic Perturbation Expansions . . . 354
5.4.2 The Dyson Equation . . . 360
5.4.3 Exercises . . . 363
5.5 The Ground-State Energy of the Electron Gas (Jellium Model) . . . 364
5.5.1 First-Order Perturbation Theory . . . 364
5.5.2 Second-Order Perturbation Theory . . . 367
5.5.3 The Correlation Energy . . . 372
5.6 Diagrammatic Partial Sums . . . 382
5.6.1 The Polarisation Propagator . . . 383
5.6.2 Effective Interactions . . . 389
5.6.3 Vertex Function . . . 394
5.6.4 Exercises . . . 397
5.7 Self-Examination Questions . . . 399

6 Perturbation Theory at Finite Temperatures 403
6.1 The Matsubara Method 403
6.1.1 Matsubara Functions 404
6.1.2 The Grand Canonical Partition Function 409
6.1.3 The Single-Particle Matsubara Function 412
6.2 Diagrammatic Perturbation Theory 416
6.2.1 Wick's Theorem 416
6.2.2 Diagram Analysis of the Grand-Canonical Partition Function 420
6.2.3 Ring Diagrams 427
6.2.4 The Single-Particle Matsubara Function 430
6.3 Self-Examination Questions 434

Solutions of the Exercises 435
