List of Tables		XL
1 Arithmetic		1
1.1 Elementary Rules for Calculations		1
1.1.1 Numbers		1
1.1.1.1 Natural, Integer, and Rational Numbers		1
1.1.1.2 Irrational and Transcendental Numbers		2
1.1.1.3 Real Numbers		2
1.1.1.4 Continued Fractions		3
1.1.1.5 Commensurability		4
1.1.2 Methods for Proof		4
1.1.2.1 Direct Proof		5
1.1.2.2 Indirect Proof or Proof by Contradiction		5
1.1.2.3 Mathematical Induction		5
1.1.2.4 Constructive Proof		6
1.1.3 Sums and Products		6
1.1.3.1 Sums		6
1.1.3.2 Products		7
1.1.4 Powers, Roots, and Logarithms		7
1.1.4.1 Powers		7
1.1.4.2 Roots		8
1.1.4.3 Logarithms		9
1.1.4.4 Special Logarithms		9
1.1.5 Algebraic Expressions		10
1.1.5.1 Definitions		10
1.1.5.2 Algebraic Expressions in Detail		11
1.1.6 Integral Rational Expressions		11
1.1.6.1 Representation in Polynomial Form		11
1.1.6.2 Factorizing a Polynomial		11
1.1.6.3 Special Formulas		12
1.1.6.4 Binomial Theorem		12
1.1.6.5 Determination of the Greatest Common Divisor of Two Polynomials		14
1.1.7 Rational Expressions		14
1.1.7.1 Reducing to the Simplest Form		14
1.1.7.2 Determination of the Integral Rational Part		15
1.1.7.3 Decomposition into Partial Fractions		15
1.1.7.4 Transformations of Proportions		17
1.1.8 Irrational Expressions		17
1.2 Finite Series		18
1.2.1 Definition of a Finite Series		18
1.2.2 Arithmetic Series		18
1.2.3 Geometric Series		19
1.2.4 Special Finite Series		19
1.2.5 Mean Values		19
1.2.5.1 Arithmetic Mean or Arithmetic Average		19
1.2.5.2 Geometric Mean or Geometric Average		20
1.2.5.3 Harmonic Mean		20
1.2.5.4 Quadratic Mean		20

	1.2.5.5	Relations Between the Means of Two Positive Values	20
1.3		Business Mathematics	21
	1.3.1	Calculation of Interest or Percentage	21
	1.3.2	Calculation of Compound Interest	22
	1.3.2.1	Interest	22
	1.3.2.2	Compound Interest	22
	1.3.3	Amortization Calculus	23
	1.3.3.1	Amortization	23
	1.3.3.2	Equal Principal Repayments	23
	1.3.3.3	Equal Annuities	24
	1.3.4	Annuity Calculations	25
	1.3.4.1	Annuities	25
	1.3.4.2	Future Amount of an Ordinary Annuity	25
	1.3.4.3	Balance after n Annuity Payments	25
	1.3.5	Depreciation	26
1.4		Inequalities	28
	1.4.1	Pure Inequalities	28
	1.4.1.1	Definitions	28
	1.4.1.2	Properties of Inequalities of Type I and II	29
	1.4.2	Special Inequalities	30
	1.4.2.1	Triangle Inequality for Real Numbers	30
	1.4.2.2	Triangle Inequality for Complex Numbers	30
	1.4.2.3	Inequalities for Absolute Values of Differences of Real and Complex Numbers	30
	1.4.2.4	Inequality for Arithmetic and Geometric Means	30
	1.4.2.5	Inequality for Arithmetic and Quadratic Means	30
	1.4.2.6	Inequalities for Different Means of Real Numbers	30
	1.4.2.7	Bernoulli's Inequality	30
	1.4.2.8	Binomial Inequality	31
	1.4.2.9	Cauchy-Schwarz Inequality	31
	1.4.2.10	Chebyshev Inequality	31
	1.4.2.11	Generalized Chebyshev Inequality	32
	1.4.2.12	Hölder Inequality	32
	1.4.2.13	Minkowski Inequality	32
	1.4.3	Solution of Linear and Quadratic Inequalities	33
	1.4.3.1	General Remarks	33
	1.4.3.2	Linear Inequalities	33
	1.4.3.3	Quadratic Inequalities	33
	1.4.3.4	General Case for Inequalities of Second Degree	33
1.5		Complex Numbers	34
	1.5.1	Imaginary and Complex Numbers	34
	1.5.1.1	Imaginary Unit	34
	1.5.1.2	Complex Numbers	34
	1.5.2	Geometric Representation	34
	1.5.2.1	Vector Representation	34
	1.5.2.2	Equality of Complex Numbers	34
	1.5.2.3	Trigonometric Form of Complex Numbers	35
	1.5.2.4	Exponential Form of a Complex Number	35
	1.5.2.5	Conjugate Complex Numbers	36
	1.5.3	Calculation with Complex Numbers	36
	1.5.3.1	Addition and Subtraction	36
	1.5.3.2	Multiplication	36

1.5.3.3	Division	37
1.5.3.4	General Rules for the Basic Operations	37
1.5.3.5	Taking Powers of Complex Numbers	37
1.5.3.6	Taking of the n -th Root of a Complex Number	38
1.6	Algebraic and Transcendental Equations	38
1.6.1	Transforming Algebraic Equations to Normal Form	38
1.6.1.1	Definition	38
1.6.1.2	Systems of n Algebraic Equations	38
1.6.1.3	Superfluous Roots	39
1.6.2	Equations of Degree at Most Four	39
1.6.2.1	Equations of Degree One (Linear Equations)	39
1.6.2.2	Equations of Degree Two (Quadratic Equations)	39
1.6.2.3	Equations of Degree Three (Cubic Equations)	40
1.6.2.4	Equations of Degree Four	42
1.6.2.5	Equations of Higher Degree	43
1.6.3	Equations of Degree n	43
1.6.3.1	General Properties of Algebraic Equations	43
1.6.3.2	Equations with Real Coefficients	44
1.6.4	Reducing Transcendental Equations to Algebraic Equations	45
1.6.4.1	Definition	45
1.6.4.2	Exponential Equations	45
1.6.4.3	Logarithmic Equations	46
1.6.4.4	Trigonometric Equations	46
1.6.4.5	Equations with Hyperbolic Functions	46
2	Functions	47
2.1	Notion of Functions	47
2.1.1	Definition of a Function	47
2.1.1.1	Function	47
2.1.1.2	Real Functions	47
2.1.1.3	Functions of Several Variables	47
2.1.1.4	Complex Functions	47
2.1.1.5	Further Functions	47
2.1.1.6	Functionals	47
2.1.1.7	Functions and Mappings	48
2.1.2	Methods for Defining a Real Function	48
2.1.2.1	Defining a Function	48
2.1.2.2	Analytic Representation of a Function	48
2.1.3	Certain Types of Functions	49
2.1.3.1	Monotone Functions	49
2.1.3.2	Bounded Functions	50
2.1.3.3	Even Functions	50
2.1.3.4	Odd Functions	50
2.1.3.5	Representation with Even and Odd Functions	50
2.1.3.6	Periodic Functions	50
2.1.3.7	Inverse Functions	51
2.1.4	Limits of Functions	51
2.1.4.1	Definition of the Limit of a Function	51
2.1.4.2	Definition by Limit of Sequences	52
2.1.4.3	Cauchy Condition for Convergence	52
2.1.4.4	Infinity as a Limit of a Function	52
2.1.4.5	Left-Hand and Right-Hand Limit of a Function	52

	2.1.4.6	Limit of a Function as x Tends to Infinity	53
	2.1.4.7	Theorems About Limits of Functions	53
	2.1.4.8	Calculation of Limits	54
	2.1.4.9	Order of Magnitude of Functions and Landau Order Symbols	55
	2.1.5	Continuity of a Function	57
	2.1.5.1	Notion of Continuity and Discontinuity	57
	2.1.5.2	Definition of Continuity	57
	2.1.5.3	Most Frequent Types of Discontinuities	57
	2.1.5.4	Continuity and Discontinuity of Elementary Functions	58
	2.1.5.5	Properties of Continuous Functions	59
2.2		Elementary Functions	60
	2.2.1	Algebraic Functions	60
	2.2.1.1	Polynomials	60
	2.2.1.2	Rational Functions	61
	2.2.1.3	Irrational Functions	61
	2.2.2	Transcendental Functions	61
	2.2.2.1	Exponential Functions	61
	2.2.2.2	Logarithmic Functions	61
	2.2.2.3	Trigonometric Functions	61
	2.2.2.4	Inverse Trigonometric Functions	61
	2.2.2.5	Hyperbolic Functions	62
	2.2.2.6	Inverse Hyperbolic Functions	62
	2.2.3	Composite Functions	62
2.3		Polynomials	62
	2.3.1	Linear Function	62
	2.3.2	Quadratic Polynomial	62
	2.3.3	Cubic Polynomials	63
	2.3.4	Polynomials of n -th Degree	63
	2.3.5	Parabola of n -th Degree	64
2.4		Rational Functions	64
	2.4.1	Special Fractional Linear Function (Inverse Proportionality)	64
	2.4.2	Linear Fractional Function	65
	2.4.3	Curves of Third Degree, Type I	65
	2.4.4	Curves of Third Degree, Type II	66
	2.4.5	Curves of Third Degree, Type III	67
	2.4.6	Reciprocal Powers	68
2.5		Irrational Functions	69
	2.5.1	Square Root of a Linear Binomial	69
	2.5.2	Square Root of a Quadratic Polynomial	69
	2.5.3	Power Function	70
2.6		Exponential Functions and Logarithmic Functions	71
	2.6.1	Exponential Functions	71
	2.6.2	Logarithmic Functions	71
	2.6.3	Error Curve	72
	2.6.4	Exponential Sum	72
	2.6.5	Generalized Error Function	73
	2.6.6	Product of Power and Exponential Functions	74
2.7		Trigonometric Functions (Functions of Angles)	74
	2.7.1	Basic Notion	74
	2.7.1.1	Definition and Representation	74
	2.7.1.2	Range and Behavior of the Functions	77
	2.7.2	Important Formulas for Trigonometric Functions	79

	2.7.2.1	Relations Between the Trigonometric Functions of the Same Angle (Addition Theorems)	79
	2.7.2.2	Trigonometric Functions of the Sum and Difference of Two Angles	79
	2.7.2.3	Trigonometric Functions of an Integer Multiple of an Angle	79
	2.7.2.4	Trigonometric Functions of Half-Angles	80
	2.7.2.5	Sum and Difference of Two Trigonometric Functions	81
	2.7.2.6	Products of Trigonometric Functions	81
	2.7.2.7	Powers of Trigonometric Functions	82
	2.7.3	Description of Oscillations	82
	2.7.3.1	Formulation of the Problem	82
	2.7.3.2	Superposition of Oscillations	82
	2.7.3.3	Vector Diagram for Oscillations	83
	2.7.3.4	Damping of Oscillations	83
2.8		Inverse Trigonometric Functions	84
	2.8.1	Definition of the Inverse Trigonometric Functions	84
	2.8.2	Reduction to the Principal Value	84
	2.8.3	Relations Between the Principal Values	85
	2.8.4	Formulas for Negative Arguments	86
	2.8.5	Sum and Difference of $\arcsin x$ and $\arcsin y$	86
	2.8.6	Sum and Difference of $\arccos x$ and $\arccos y$	86
	2.8.7	Sum and Difference of $\arctan x$ and $\arctan y$	86
	2.8.8	Special Relations for $\arcsin x, \arccos x, \arctan x$	87
2.9		Hyperbolic Functions	87
	2.9.1	Definition of Hyperbolic Functions	87
	2.9.2	Graphical Representation of the Hyperbolic Functions	88
	2.9.2.1	Hyperbolic Sine	88
	2.9.2.2	Hyperbolic Cosine	88
	2.9.2.3	Hyperbolic Tangent	88
	2.9.2.4	Hyperbolic Cotangent	89
	2.9.3	Important Formulas for the Hyperbolic Functions	89
	2.9.3.1	Hyperbolic Functions of One Variable	89
	2.9.3.2	Expressing a Hyperbolic Function by Another One with the Same Argument	89
	2.9.3.3	Formulas for Negative Arguments	89
	2.9.3.4	Hyperbolic Functions of the Sum and Difference of Two Arguments (Addition Theorems)	89
	2.9.3.5	Hyperbolic Functions of Double Arguments	90
	2.9.3.6	De Moivre Formula for Hyperbolic Functions	90
	2.9.3.7	Hyperbolic Functions of Half-Argument	90
	2.9.3.8	Sum and Difference of Hyperbolic Functions	90
	2.9.3.9	Relation Between Hyperbolic and Trigonometric Functions with Complex Arguments z	91
2.10		Area Functions	91
	2.10.1	Definitions	91
	2.10.1.1	Area Sine	91
	2.10.1.2	Area Cosine	91
	2.10.1.3	Area Tangent	92
	2.10.1.4	Area Cotangent	92
	2.10.2	Determination of Area Functions Using Natural Logarithm	92
	2.10.3	Relations Between Different Area Functions	93
	2.10.4	Sum and Difference of Area Functions	93
	2.10.5	Formulas for Negative Arguments	93

2.11	Curves of Order Three (Cubic Curves)	93
2.11.1	Semicubic Parabola	93
2.11.2	Witch of Agnesi	94
2.11.3	Cartesian Folium (Folium of Descartes)	94
2.11.4	Cissoid	95
2.11.5	Strophoide	95
2.12	Curves of Order Four (Quartics)	96
2.12.1	Conchoid of Nicomedes	96
2.12.2	General Conchoid	96
2.12.3	Pascal's Limaçon	96
2.12.4	Cardioid	98
2.12.5	Cassinian Curve	98
2.12.6	Lemniscate	99
2.13	Cycloids	100
2.13.1	Common (Standard) Cycloid	100
2.13.2	Prolate and Curtate Cycloids or Trochoids	100
2.13.3	Epicycloid	101
2.13.4	Hypocycloid and Astroid	102
2.13.5	Prolate and Curtate Epicycloid and Hypocycloid	102
2.14	Spirals	103
2.14.1	Archimedean Spiral	103
2.14.2	Hyperbolic Spiral	104
2.14.3	Logarithmic Spiral	104
2.14.4	Evolute of the Circle	104
2.14.5	Clothoid	105
2.15	Various Other Curves	105
2.15.1	Catenary Curve	105
2.15.2	Tractrix	106
2.16	Determination of Empirical Curves	106
2.16.1	Procedure	106
2.16.1.1	Curve-Shape Comparison	106
2.16.1.2	Rectification	107
2.16.1.3	Determination of Parameters	107
2.16.2	Useful Empirical Formulas	107
2.16.2.1	Power Functions	108
2.16.2.2	Exponential Functions	108
2.16.2.3	Quadratic Polynomial	109
2.16.2.4	Rational Linear Function	109
2.16.2.5	Square Root of a Quadratic Polynomial	110
2.16.2.6	General Error Curve	110
2.16.2.7	Curve of Order Three, Type II	110
2.16.2.8	Curve of Order Three, Type III	111
2.16.2.9	Curve of Order Three, Type I	111
2.16.2.10	Product of Power and Exponential Functions	112
2.16.2.11	Exponential Sum	112
2.16.2.12	Numerical Example	112
2.17	Scales and Graph Paper	114
2.17.1	Scales	114
2.17.2	Graph Paper	115
2.17.2.1	Semilogarithmic Paper	115
2.17.2.2	Double Logarithmic Paper	115
2.17.2.3	Graph Paper with a Reciprocal Scale	116

2.17.2.4 Remark	116
2.18 Functions of Several Variables	117
2.18.1 Definition and Representation	117
2.18.1.1 Representation of Functions of Several Variables	117
2.18.1.2 Geometric Representation of Functions of Several Variables	117
2.18.2 Different Domains in the Plane	118
2.18.2.1 Domain of a Function	118
2.18.2.2 Two-Dimensional Domains	118
2.18.2.3 Three or Multidimensional Domains	118
2.18.2.4 Methods to Determine a Function	119
2.18.2.5 Various Ways to Define a Function	120
2.18.2.6 Dependence of Functions	121
2.18.3 Limits	122
2.18.3.1 Definition	122
2.18.3.2 Exact Definition	122
2.18.3.3 Generalization for Several Variables	122
2.18.3.4 Iterated Limit	122
2.18.4 Continuity	122
2.18.5 Properties of Continuous Functions	123
2.18.5.1 Theorem on Zeros of Bolzano	123
2.18.5.2 Intermediate Value Theorem	123
2.18.5.3 Theorem About the Boundedness of a Function	123
2.18.5.4 Weierstrass Theorem (About the Existence of Maximum and Minimum)	123
2.19 Nomography	123
2.19.1 Nomograms	123
2.19.2 Net Charts	123
2.19.3 Alignment Charts	124
2.19.3.1 Alignment Charts with Three Straight-Line Scales Through a Point	125
2.19.3.2 Alignment Charts with Two Parallel and One Inclined Straight-Line Scales	125
2.19.3.3 Alignment Charts with Two Parallel Straight Lines and a Curved Scale	126
2.19.4 Net Charts for More Than Three Variables	127
3 Geometry	128
3.1 Plane Geometry	128
3.1.1 Basic Notation	128
3.1.1.1 Point, Line, Ray, Segment	128
3.1.1.2 Angle	128
3.1.1.3 Angle Between Two Intersecting Lines	128
3.1.1.4 Pairs of Angles with Intersecting Parallels	129
3.1.1.5 Angles Measured in Degrees and in Radians	130
3.1.2 Geometrical Definition of Circular and Hyperbolic Functions	130
3.1.2.1 Definition of Circular or Trigonometric Functions	130
3.1.2.2 Definitions of the Hyperbolic Functions	131
3.1.3 Plane Triangles	131
3.1.3.1 Statements about Plane Triangles	131
3.1.3.2 Symmetry	132
3.1.4 Plane Quadrangles	134
3.1.4.1 Parallelogram	134
3.1.4.2 Rectangle and Square	135

	3.1.4.3	Rhombus	135
	3.1.4.4	Trapezoid	135
	3.1.4.5	General Quadrangle	136
	3.1.4.6	Inscribed Quadrangle	136
	3.1.4.7	Circumscribing Quadrangle	136
3.1.5		Polygons in the Plane	137
	3.1.5.1	General Polygon	137
	3.1.5.2	Regular Convex Polygons	137
	3.1.5.3	Some Regular Convex Polygons	138
3.1.6		The Circle and Related Shapes	138
	3.1.6.1	Circle	138
	3.1.6.2	Circular Segment and Circular Sector	140
	3.1.6.3	Annulus	140
3.2		Plane Trigonometry	141
	3.2.1	Triangles	141
	3.2.1.1	Calculations in Right-Angled Triangles in the Plane	141
	3.2.1.2	Calculations in General Triangles in the Plane	141
	3.2.2	Geodesic Applications	143
	3.2.2.1	Geodetic Coordinates	143
	3.2.2.2	Angles in Geodesy	145
	3.2.2.3	Applications in Surveying	147
3.3		Stereometry	150
	3.3.1	Lines and Planes in Space	150
	3.3.2	Edge, Corner, Solid Angle	150
	3.3.3	Polyeder or Polyhedron	151
	3.3.4	Solids Bounded by Curved Surfaces	154
3.4		Spherical Trigonometry	158
	3.4.1	Basic Concepts of Geometry on the Sphere	158
	3.4.1.1	Curve, Arc, and Angle on the Sphere	158
	3.4.1.2	Special Coordinate Systems	160
	3.4.1.3	Spherical Lune or Biangle	161
	3.4.1.4	Spherical Triangle	161
	3.4.1.5	Polar Triangle	162
	3.4.1.6	Euler Triangles and Non-Euler Triangles	162
	3.4.1.7	Trihedral Angle	163
	3.4.2	Basic Properties of Spherical Triangles	163
	3.4.2.1	General Statements	163
	3.4.2.2	Fundamental Formulas and Applications	164
	3.4.2.3	Further Formulas	166
	3.4.3	Calculation of Spherical Triangles	167
	3.4.3.1	Basic Problems, Accuracy Observations	167
	3.4.3.2	Right-Angled Spherical Triangles	168
	3.4.3.3	Spherical Triangles with Oblique Angles	169
	3.4.3.4	Spherical Curves	172
3.5		Vector Algebra and Analytical Geometry	180
	3.5.1	Vector Algebra	180
	3.5.1.1	Definition of Vectors	180
	3.5.1.2	Calculation Rules for Vectors	181
	3.5.1.3	Coordinates of a Vector	182
	3.5.1.4	Directional Coefficient	183
	3.5.1.5	Scalar Product and Vector Product	183
	3.5.1.6	Combination of Vector Products	184

3.5.1.7	Vector Equations	187
3.5.1.8	Covariant and Contravariant Coordinates of a Vector	187
3.5.1.9	Geometric Applications of Vector Algebra	189
3.5.2	Analytical Geometry of the Plane	189
3.5.2.1	Basic Concepts, Coordinate Systems in the Plane	189
3.5.2.2	Coordinate Transformations	190
3.5.2.3	Special Notation in the Plane	191
3.5.2.4	Line	194
3.5.2.5	Circle	197
3.5.2.6	Ellipse	198
3.5.2.7	Hyperbola	200
3.5.2.8	Parabola	203
3.5.2.9	Quadratic Curves (Curves of Second Order or Conic Sections)	205
3.5.3	Analytical Geometry of Space	207
3.5.3.1	Basic Concepts, Spatial Coordinate Systems	207
3.5.3.2	Transformation of Orthogonal Coordinates	210
3.5.3.3	Special Quantities in Space	212
3.5.3.4	Line and Plane in Space	214
3.5.3.5	Surfaces of Second Order, Equations in Normal Form	220
3.5.3.6	Surfaces of Second Order or Quadratic Surfaces, General Theory	223
3.6	Differential Geometry	225
3.6.1	Plane Curves	225
3.6.1.1	Ways to Define a Plane Curve	225
3.6.1.2	Local Elements of a Curve	225
3.6.1.3	Special Points of a Curve	231
3.6.1.4	Asymptotes of Curves	234
3.6.1.5	General Discussion of a Curve Given by an Equation	235
3.6.1.6	Evolutes and Evolvents	236
3.6.1.7	Envelope of a Family of Curves	237
3.6.2	Space Curves	238
3.6.2.1	Ways to Define a Space Curve	238
3.6.2.2	Moving Trihedral	238
3.6.2.3	Curvature and Torsion	240
3.6.3	Surfaces	243
3.6.3.1	Ways to Define a Surface	243
3.6.3.2	Tangent Plane and Surface Normal	244
3.6.3.3	Line Elements of a Surface	245
3.6.3.4	Curvature of a Surface	247
3.6.3.5	Ruled Surfaces and Developable Surfaces	250
3.6.3.6	Geodesic Lines on a Surface	250
4	Linear Algebra	251
4.1	Matrices	251
4.1.1	Notion of Matrix	251
4.1.2	Square Matrices	252
4.1.3	Vectors	253
4.1.4	Arithmetical Operations with Matrices	254
4.1.5	Rules of Calculation for Matrices	257
4.1.6	Vector and Matrix Norms	258
4.1.6.1	Vector Norms	258
4.1.6.2	Matrix Norms	259
4.2	Determinants	259

4.2.1	Definitions	259
4.2.2	Rules of Calculation for Determinants	260
4.2.3	Evaluation of Determinants	261
4.3	Tensors	262
4.3.1	Transformation of Coordinate Systems	262
4.3.2	Tensors in Cartesian Coordinates	262
4.3.3	Tensors with Special Properties	264
4.3.3.1	Tensors of Rank 2	264
4.3.3.2	Invariant Tensors	265
4.3.4	Tensors in Curvilinear Coordinate Systems	266
4.3.4.1	Covariant and Contravariant Basis Vectors	266
4.3.4.2	Covariant and Contravariant Coordinates of Tensors of Rank 1	266
4.3.4.3	Covariant, Contravariant and Mixed Coordinates of Tensors of Rank 2	267
4.3.4.4	Rules of Calculation	268
4.3.5	Pseudotensors	268
4.3.5.1	Symmetry with Respect to the Origin	269
4.3.5.2	Introduction to the Notion of Pseudotensors	270
4.4	Systems of Linear Equations	271
4.4.1	Linear Systems, Pivoting	271
4.4.1.1	Linear Systems	271
4.4.1.2	Pivoting	271
4.4.1.3	Linear Dependence	272
4.4.1.4	Calculation of the Inverse of a Matrix	272
4.4.2	Solution of Systems of Linear Equations	272
4.4.2.1	Definition and Solvability	272
4.4.2.2	Application of Pivoting	274
4.4.2.3	Cramer's Rule	275
4.4.2.4	Gauss's Algorithm	276
4.4.3	Overdetermined Linear Equation Systems	277
4.4.3.1	Overdetermined Linear Systems of Equations and Linear Mean Square Value Problems	277
4.4.3.2	Suggestions for Numerical Solutions of Mean Square Value Problems	278
4.5	Eigenvalue Problems for Matrices	278
4.5.1	General Eigenvalue Problem	278
4.5.2	Special Eigenvalue Problem	278
4.5.2.1	Characteristic Polynomial	278
4.5.2.2	Real Symmetric Matrices, Similarity Transformations	280
4.5.2.3	Transformation of Principal Axes of Quadratic Forms	281
4.5.2.4	Suggestions for the Numerical Calculations of Eigenvalues	283
4.5.3	Singular Value Decomposition	285
5	Algebra and Discrete Mathematics	286
5.1	Logic	286
5.1.1	Propositional Calculus	286
5.1.2	Formulas in Predicate Calculus	289
5.2	Set Theory	290
5.2.1	Concept of Set, Special Sets	290
5.2.2	Operations with Sets	291
5.2.3	Relations and Mappings	294
5.2.4	Equivalence and Order Relations	296
5.2.5	Cardinality of Sets	298

5.3	Classical Algebraic Structures	298
5.3.1	Operations	298
5.3.2	Semigroups	299
5.3.3	Groups	299
5.3.3.1	Definition and Basic Properties	299
5.3.3.2	Subgroups and Direct Products	300
5.3.3.3	Mappings Between Groups	302
5.3.4	Group Representations	303
5.3.4.1	Definitions	303
5.3.4.2	Particular Representations	303
5.3.4.3	Direct Sum of Representations	305
5.3.4.4	Direct Product of Representations	305
5.3.4.5	Reducible and Irreducible Representations	305
5.3.4.6	Schur's Lemma 1	306
5.3.4.7	Clebsch–Gordan Series	306
5.3.4.8	Irreducible Representations of the Symmetric Group S_M	306
5.3.5	Applications of Groups	307
5.3.5.1	Symmetry Operations, Symmetry Elements	307
5.3.5.2	Symmetry Groups or Point Groups	308
5.3.5.3	Symmetry Operations with Molecules	308
5.3.5.4	Symmetry Groups in Crystallography	310
5.3.5.5	Symmetry Groups in Quantum Mechanics	312
5.3.5.6	Further Applications of Group Theory in Physics	312
5.3.6	Rings and Fields	313
5.3.6.1	Definitions	313
5.3.6.2	Subrings, Ideals	313
5.3.6.3	Homomorphism, Isomorphism, Homomorphism Theorem	314
5.3.6.4	Finite Fields and Shift Registers	314
5.3.7	Vector Spaces	316
5.3.7.1	Definition	316
5.3.7.2	Linear Dependence	317
5.3.7.3	Linear Mappings	317
5.3.7.4	Subspaces, Dimension Formula	317
5.3.7.5	Euclidean Vector Spaces, Euclidean Norm	318
5.3.7.6	Linear Operators in Vector Spaces	319
5.4	Elementary Number Theory	320
5.4.1	Divisibility	320
5.4.1.1	Divisibility and Elementary Divisibility Rules	320
5.4.1.2	Prime Numbers	320
5.4.1.3	Criteria for Divisibility	322
5.4.1.4	Greatest Common Divisor and Least Common Multiple	323
5.4.1.5	Fibonacci Numbers	325
5.4.2	Linear Diophantine Equations	325
5.4.3	Congruences and Residue Classes	327
5.4.4	Theorems of Fermat, Euler, and Wilson	331
5.4.5	Codes	331
5.5	Cryptology	334
5.5.1	Problem of Cryptology	334
5.5.2	Cryptosystems	334
5.5.3	Mathematical Foundation	334
5.5.4	Security of Cryptosystems	335
5.5.4.1	Methods of Conventional Cryptography	335

	5.5.4.2	Linear Substitution Ciphers	336
	5.5.4.3	Vigenère Cipher	336
	5.5.4.4	Matrix Substitution	336
	5.5.5	Methods of Classical Cryptanalysis	337
	5.5.5.1	Statistical Analysis	337
	5.5.5.2	Kasiski–Friedman Test	337
	5.5.6	One-Time Pad	338
	5.5.7	Public Key Methods	338
	5.5.7.1	Diffie–Hellman Key Exchange	338
	5.5.7.2	One-Way Function	339
	5.5.7.3	RSA Method	339
	5.5.8	AES Algorithm (Advanced Encryption Standard)	339
	5.5.9	IDEA Algorithm (International Data Encryption Algorithm)	340
5.6		Universal Algebra	340
	5.6.1	Definition	340
	5.6.2	Congruence Relations, Factor Algebras	340
	5.6.3	Homomorphism	341
	5.6.4	Homomorphism Theorem	341
	5.6.5	Varieties	341
	5.6.6	Term Algebras, Free Algebras	341
5.7		Boolean Algebras and Switch Algebra	342
	5.7.1	Definition	342
	5.7.2	Duality Principle	343
	5.7.3	Finite Boolean Algebras	343
	5.7.4	Boolean Algebras as Orderings	343
	5.7.5	Boolean Functions, Boolean Expressions	344
	5.7.6	Normal Forms	345
	5.7.7	Switch Algebra	346
5.8		Algorithms of Graph Theory	348
	5.8.1	Basic Notions and Notation	348
	5.8.2	Traverse of Undirected Graphs	351
	5.8.2.1	Edge Sequences or Paths	351
	5.8.2.2	Euler Trails	352
	5.8.2.3	Hamiltonian Cycles	353
	5.8.3	Trees and Spanning Trees	354
	5.8.3.1	Trees	354
	5.8.3.2	Spanning Trees	355
	5.8.4	Matchings	356
	5.8.5	Planar Graphs	357
	5.8.6	Paths in Directed Graphs	357
	5.8.7	Transport Networks	358
5.9		Fuzzy Logic	360
	5.9.1	Basic Notions of Fuzzy Logic	360
	5.9.1.1	Interpretation of Fuzzy Sets	360
	5.9.1.2	Membership Functions on the Real Line	361
	5.9.1.3	Fuzzy Sets	363
	5.9.2	Aggregation of Fuzzy Sets	365
	5.9.2.1	Concepts for Aggregation of Fuzzy Sets	365
	5.9.2.2	Practical Aggregator Operations of Fuzzy Sets	366
	5.9.2.3	Compensatory Operators	368
	5.9.2.4	Extension Principle	368
	5.9.2.5	Fuzzy Complement	368

5.9.3	Fuzzy-Valued Relations	369
5.9.3.1	Fuzzy Relations	369
5.9.3.2	Fuzzy Product Relation $R \circ S$	371
5.9.4	Fuzzy Inference (Approximate Reasoning)	372
5.9.5	Defuzzification Methods	373
5.9.6	Knowledge-Based Fuzzy Systems	374
5.9.6.1	Method of Mamdani	374
5.9.6.2	Method of Sugeno	375
5.9.6.3	Cognitive Systems	375
5.9.6.4	Knowledge-Based Interpolation Systems	377
6	Differentiation	379
6.1	Differentiation of Functions of One Variable	379
6.1.1	Differential Quotient	379
6.1.2	Rules of Differentiation for Functions of One Variable	380
6.1.2.1	Derivatives of the Elementary Functions	380
6.1.2.2	Basic Rules of Differentiation	380
6.1.3	Derivatives of Higher Order	385
6.1.3.1	Definition of Derivatives of Higher Order	385
6.1.3.2	Derivatives of Higher Order of some Elementary Functions	385
6.1.3.3	Leibniz's Formula	385
6.1.3.4	Higher Derivatives of Functions Given in Parametric Form	387
6.1.3.5	Derivatives of Higher Order of the Inverse Function	387
6.1.4	Fundamental Theorems of Differential Calculus	388
6.1.4.1	Monotonicity	388
6.1.4.2	Fermat's Theorem	388
6.1.4.3	Rolle's Theorem	388
6.1.4.4	Mean Value Theorem of Differential Calculus	389
6.1.4.5	Taylor's Theorem of Functions of One Variable	389
6.1.4.6	Generalized Mean Value Theorem of Differential Calculus (Cauchy's Theorem)	390
6.1.5	Determination of the Extreme Values and Inflection Points	390
6.1.5.1	Maxima and Minima	390
6.1.5.2	Necessary Conditions for the Existence of a Relative Extreme Value	390
6.1.5.3	Relative Extreme Values of a Differentiable, Explicit Function	391
6.1.5.4	Determination of Absolute Extrema	392
6.1.5.5	Determination of the Extrema of Implicit Functions	392
6.2	Differentiation of Functions of Several Variables	392
6.2.1	Partial Derivatives	392
6.2.1.1	Partial Derivative of a Function	392
6.2.1.2	Geometrical Meaning for Functions of Two Variables	393
6.2.1.3	Differentials of x and $f(x)$	393
6.2.1.4	Basic Properties of the Differential	394
6.2.1.5	Partial Differential	394
6.2.2	Total Differential and Differentials of Higher Order	394
6.2.2.1	Notion of Total Differential of a Function of Several Variables (Complete Differential)	394
6.2.2.2	Derivatives and Differentials of Higher Order	395
6.2.2.3	Taylor's Theorem for Functions of Several Variables	396
6.2.3	Rules of Differentiation for Functions of Several Variables	397
6.2.3.1	Differentiation of Composite Functions	397
6.2.3.2	Differentiation of Implicit Functions	398

6.2.4	Substitution of Variables in Differential Expressions and Coordinate Transformations	399
6.2.4.1	Function of One Variable	399
6.2.4.2	Function of Two Variables	400
6.2.5	Extreme Values of Functions of Several Variables	401
6.2.5.1	Definition	401
6.2.5.2	Geometric Representation	401
6.2.5.3	Determination of Extreme Values of Functions of Two Variables	402
6.2.5.4	Determination of the Extreme Values of a Function of n Variables	402
6.2.5.5	Solution of Approximation Problems	403
6.2.5.6	Extreme Value Problem with Side Conditions	403
7	Infinite Series	404
7.1	Sequences of Numbers	404
7.1.1	Properties of Sequences of Numbers	404
7.1.1.1	Definition of Sequence of Numbers	404
7.1.1.2	Monotone Sequences of Numbers	404
7.1.1.3	Bounded Sequences	404
7.1.2	Limits of Sequences of Numbers	405
7.2	Number Series	406
7.2.1	General Convergence Theorems	406
7.2.1.1	Convergence and Divergence of Infinite Series	406
7.2.1.2	General Theorems about the Convergence of Series	406
7.2.2	Convergence Criteria for Series with Positive Terms	407
7.2.2.1	Comparison Criterion	407
7.2.2.2	D'Alembert's Ratio Test	407
7.2.2.3	Root Test of Cauchy	408
7.2.2.4	Integral Test of Cauchy	408
7.2.3	Absolute and Conditional Convergence	409
7.2.3.1	Definition	409
7.2.3.2	Properties of Absolutely Convergent Series	409
7.2.3.3	Alternating Series	410
7.2.4	Some Special Series	410
7.2.4.1	The Values of Some Important Number Series	410
7.2.4.2	Bernoulli and Euler Numbers	412
7.2.5	Estimation of the Remainder	413
7.2.5.1	Estimation with Majorant	413
7.2.5.2	Alternating Convergent Series	414
7.2.5.3	Special Series	414
7.3	Function Series	414
7.3.1	Definitions	414
7.3.2	Uniform Convergence	414
7.3.2.1	Definition, Weierstrass Theorem	414
7.3.2.2	Properties of Uniformly Convergent Series	415
7.3.3	Power series	416
7.3.3.1	Definition, Convergence	416
7.3.3.2	Calculations with Power Series	416
7.3.3.3	Taylor Series Expansion, Maclaurin Series	417
7.3.4	Approximation Formulas	418
7.3.5	Asymptotic Power Series	419
7.3.5.1	Asymptotic Behavior	419
7.3.5.2	Asymptotic Power Series	420

7.4	Fourier Series	420
7.4.1	Trigonometric Sum and Fourier Series	420
7.4.1.1	Basic Notions	420
7.4.1.2	Most Important Properties of the Fourier Series	421
7.4.2	Determination of Coefficients for Symmetric Functions	422
7.4.2.1	Different Kinds of Symmetries	422
7.4.2.2	Forms of the Expansion into a Fourier Series	423
7.4.3	Determination of the Fourier Coefficients with Numerical Methods	424
7.4.4	Fourier Series and Fourier Integrals	424
7.4.5	Remarks on the Table of Some Fourier Expansions	425
8	Integral Calculus	427
8.1	Indefinite Integrals	427
8.1.1	Primitive Function or Antiderivative	427
8.1.1.1	Indefinite Integrals	428
8.1.1.2	Integrals of Elementary Functions	428
8.1.2	Rules of Integration	429
8.1.3	Integration of Rational Functions	432
8.1.3.1	Integrals of Integer Rational Functions (Polynomials)	432
8.1.3.2	Integrals of Fractional Rational Functions	432
8.1.3.3	Four Cases of Partial Fraction Decomposition	432
8.1.4	Integration of Irrational Functions	435
8.1.4.1	Substitution to Reduce to Integration of Rational Functions	435
8.1.4.2	Integration of Binomial Integrands	436
8.1.4.3	Elliptic Integrals	437
8.1.5	Integration of Trigonometric Functions	438
8.1.5.1	Substitution	438
8.1.5.2	Simplified Methods	438
8.1.6	Integration of Further Transcendental Functions	439
8.1.6.1	Integrals with Exponential Functions	439
8.1.6.2	Integrals with Hyperbolic Functions	440
8.1.6.3	Application of Integration by Parts	440
8.1.6.4	Integrals of Transcendental Functions	440
8.2	Definite Integrals	440
8.2.1	Basic Notions, Rules and Theorems	440
8.2.1.1	Definition and Existence of the Definite Integral	440
8.2.1.2	Properties of Definite Integrals	441
8.2.1.3	Further Theorems about the Limits of Integration	443
8.2.1.4	Evaluation of the Definite Integral	445
8.2.2	Application of Definite Integrals	447
8.2.2.1	General Principles for Application of the Definite Integral	447
8.2.2.2	Applications in Geometry	448
8.2.2.3	Applications in Mechanics and Physics	451
8.2.3	Improper Integrals, Stieltjes and Lebesgue Integrals	453
8.2.3.1	Generalization of the Notion of the Integral	453
8.2.3.2	Integrals with Infinite Integration Limits	454
8.2.3.3	Integrals with Unbounded Integrand	456
8.2.4	Parametric Integrals	459
8.2.4.1	Definition of Parametric Integrals	459
8.2.4.2	Differentiation Under the Symbol of Integration	459
8.2.4.3	Integration Under the Symbol of Integration	459
8.2.5	Integration by Series Expansion, Special Non-Elementary Functions	460

8.3	Line Integrals	462
8.3.1	Line Integrals of the First Type	463
8.3.1.1	Definitions	463
8.3.1.2	Existence Theorem	463
8.3.1.3	Evaluation of the Line Integral of the First Type	463
8.3.1.4	Application of the Line Integral of the First Type	464
8.3.2	Line Integrals of the Second Type	464
8.3.2.1	Definitions	464
8.3.2.2	Existence Theorem	466
8.3.2.3	Calculation of the Line Integral of the Second Type	466
8.3.3	Line Integrals of General Type	467
8.3.3.1	Definition	467
8.3.3.2	Properties of the Line Integral of General Type	467
8.3.3.3	Integral Along a Closed Curve	468
8.3.4	Independence of the Line Integral of the Path of Integration	468
8.3.4.1	Two-Dimensional Case	468
8.3.4.2	Existence of a Primitive Function	469
8.3.4.3	Three-Dimensional Case	469
8.3.4.4	Determination of the Primitive Function	469
8.3.4.5	Zero-Valued Integral Along a Closed Curve	470
8.4	Multiple Integrals	471
8.4.1	Double Integrals	471
8.4.1.1	Notion of the Double Integral	471
8.4.1.2	Evaluation of the Double Integral	472
8.4.1.3	Applications of the Double Integral	474
8.4.2	Triple Integrals	476
8.4.2.1	Notion of the Triple Integral	476
8.4.2.2	Evaluation of the Triple Integral	476
8.4.2.3	Applications of the Triple Integral	479
8.5	Surface Integrals	479
8.5.1	Surface Integral of the First Type	479
8.5.1.1	Notion of the Surface Integral of the First Type	480
8.5.1.2	Evaluation of the Surface Integral of the First Type	481
8.5.1.3	Applications of the Surface Integral of the First Type	482
8.5.2	Surface Integral of the Second Type	483
8.5.2.1	Notion of the Surface Integral of the Second Type	483
8.5.2.2	Evaluation of Surface Integrals of the Second Type	484
8.5.3	Surface Integral in General Form	485
8.5.3.1	Notion of the Surface Integral in General Form	485
8.5.3.2	Properties of the Surface Integrals	485
8.5.3.3	An Application of the Surface Integral	486
9	Differential Equations	487
9.1	Ordinary Differential Equations	487
9.1.1	First-Order Differential Equations	488
9.1.1.1	Existence Theorems, Direction Field	488
9.1.1.2	Important Solution Methods	489
9.1.1.3	Implicit Differential Equations	492
9.1.1.4	Singular Integrals and Singular Points	493
9.1.1.5	Approximation Methods for Solution of First-Order Differential Equations	496
9.1.2	Differential Equations of Higher Order and Systems of Differential Equations	497

9.1.2.1	Basic Results	497
9.1.2.2	Lowering the Order	499
9.1.2.3	Linear n -th Order Differential Equations	500
9.1.2.4	Solution of Linear Differential Equations with Constant Coefficients	502
9.1.2.5	Systems of Linear Differential Equations with Constant Coefficients	505
9.1.2.6	Linear Second-Order Differential Equations	507
9.1.3	Boundary Value Problems	514
9.1.3.1	Problem Formulation	514
9.1.3.2	Fundamental Properties of Eigenfunctions and Eigenvalues	515
9.1.3.3	Expansion in Eigenfunctions	516
9.1.3.4	Singular Cases	516
9.2	Partial Differential Equations	517
9.2.1	First-Order Partial Differential Equations	517
9.2.1.1	Linear First-Order Partial Differential Equations	517
9.2.1.2	Non-Linear First-Order Partial Differential Equations	519
9.2.2	Linear Second-Order Partial Differential Equations	522
9.2.2.1	Classification and Properties of Second-Order Differential Equations with Two Independent Variables	522
9.2.2.2	Classification and Properties of Linear Second-Order Differential Equations with more than two Independent Variables	523

11.2.3.2	Fredholm Theorems	571
11.2.4	Numerical Methods for Fredholm Integral Equations of the Second Kind	572
11.2.4.1	Approximation of the Integral	572
11.2.4.2	Kernel Approximation	574
11.2.4.3	Collocation Method	576
11.3	Fredholm Integral Equations of the First Kind	577
11.3.1	Integral Equations with Degenerate Kernels	577
11.3.2	Analytic Basis	578
11.3.3	Reduction of an Integral Equation into a Linear System of Equations	580
11.3.4	Solution of the Homogeneous Integral Equation of the First Kind	581
11.3.5	Construction of Two Special Orthogonal Systems for a Given Kernel	582
11.3.6	Iteration Method	584
11.4	Volterra Integral Equations	585
11.4.1	Theoretical Foundations	585
11.4.2	Solution by Differentiation	586
11.4.3	Solution of the Volterra Integral Equation of the Second Kind by Neumann Series	587
11.4.4	Convolution Type Volterra Integral Equations	587
11.4.5	Numerical Methods for Volterra Integral Equations of the Second Kind	588
11.5	Singular Integral Equations	590
11.5.1	Abel Integral Equation	590
11.5.2	Singular Integral Equation with Cauchy Kernel	591
11.5.2.1	Formulation of the Problem	591
11.5.2.2	Existence of a Solution	592
11.5.2.3	Properties of Cauchy Type Integrals	592
11.5.2.4	The Hilbert Boundary Value Problem	593
11.5.2.5	Solution of the Hilbert Boundary Value Problem (in short: Hilbert Problem)	593
11.5.2.6	Solution of the Characteristic Integral Equation	594
12	Functional Analysis	596
12.1	Vector Spaces	596
12.1.1	Notion of a Vector Space	596
12.1.2	Linear and Affine Linear Subsets	597
12.1.3	Linearly Independent Elements	598
12.1.4	Convex Subsets and the Convex Hull	599
12.1.4.1	Convex Sets	599
12.1.4.2	Cones	599
12.1.5	Linear Operators and Functionals	600
12.1.5.1	Mappings	600
12.1.5.2	Homomorphism and Endomorphism	600

12.1.5.3	Isomorphic Vector Spaces	601
12.1.6	Complexification of Real Vector Spaces	601
12.1.7	Ordered Vector Spaces	601
12.1.7.1	Cone and Partial Ordering	601
12.1.7.2	Order Bounded Sets	602
12.1.7.3	Positive Operators	602
12.1.7.4	Vector Lattices	602
12.2	Metric Spaces	604
12.2.1	Notion of a Metric Space	604
12.2.1.1	Balls, Neighborhoods and Open Sets	605
12.2.1.2	Convergence of Sequences in Metric Spaces	606
12.2.1.3	Closed Sets and Closure	606
12.2.1.4	Dense Subsets and Separable Metric Spaces	607
12.2.2	Complete Metric Spaces	607
12.2.2.1	Cauchy Sequences	607
12.2.2.2	Complete Metric Spaces	608
12.2.2.3	Some Fundamental Theorems in Complete Metric Spaces	608
12.2.2.4	Some Applications of the Contraction Mapping Principle	608
12.2.2.5	Completion of a Metric Space	610
12.2.3	Continuous Operators	610
12.3	Normed Spaces	611
12.3.1	Notion of a Normed Space	611
12.3.1.1	Axioms of a Normed Space	611
12.3.1.2	Some Properties of Normed Spaces	612
12.3.2	Banach Spaces	612
12.3.2.1	Series in Normed Spaces	612
12.3.2.2	Examples of Banach Spaces	612
12.3.2.3	Sobolev Spaces	613
12.3.3	Ordered Normed Spaces	613
12.3.4	Normed Algebras	614
12.4	Hilbert Spaces	615
12.4.1	Notion of a Hilbert Space	615
12.4.1.1	Scalar Product	615
12.4.1.2	Unitary Spaces and Some of their Properties	615
12.4.1.3	Hilbert Space	615
12.4.2	Orthogonality	616
12.4.2.1	Properties of Orthogonality	616
12.4.2.2	Orthogonal Systems	616
12.4.3	Fourier Series in Hilbert Spaces	617
12.4.3.1	Best Approximation	617
12.4.3.2	Parseval Equation, Riesz–Fischer Theorem	618
12.4.4	Existence of a Basis, Isomorphic Hilbert Spaces	618
12.5	Continuous Linear Operators and Functionals	619
12.5.1	Boundedness, Norm and Continuity of Linear Operators	619
12.5.1.1	Boundedness and the Norm of Linear Operators	619
12.5.1.2	The Space of Linear Continuous Operators	619
12.5.1.3	Convergence of Operator Sequences	620
12.5.2	Linear Continuous Operators in Banach Spaces	620
12.5.3	Elements of the Spectral Theory of Linear Operators	622
12.5.3.1	Resolvent Set and the Resolvent of an Operator	622
12.5.3.2	Spectrum of an Operator	622
12.5.4	Continuous Linear Functionals	623

	12.5.4.1	Definition	623
	12.5.4.2	Continuous Linear Functionals in Hilbert Spaces, Riesz Representation Theorem	624
	12.5.4.3	Continuous Linear Functionals in L^p	624
	12.5.5	Extension of a Linear Functional	624
	12.5.6	Separation of Convex Sets	625
	12.5.7	Second Adjoint Space and Reflexive Spaces	626
12.6		Adjoint Operators in Normed Spaces	626
	12.6.1	Adjoint of a Bounded Operator	626
	12.6.2	Adjoint Operator of an Unbounded Operator	627
	12.6.3	Self-Adjoint Operators	627
	12.6.3.1	Positive Definite Operators	628
	12.6.3.2	Projectors in a Hilbert Space	628
12.7		Compact Sets and Compact Operators	628
	12.7.1	Compact Subsets of a Normed Space	628
	12.7.2	Compact Operators	628
	12.7.2.1	Definition of Compact Operator	628
	12.7.2.2	Properties of Linear Compact Operators	629
	12.7.2.3	Weak Convergence of Elements	629
	12.7.3	Fredholm Alternative	629
	12.7.4	Compact Operators in Hilbert Space	630
	12.7.5	Compact Self-Adjoint Operators	630
12.8		Non-Linear Operators	631
	12.8.1	Examples of Non-Linear Operators	631
	12.8.2	Differentiability of Non-Linear Operators	632
	12.8.3	Newton's Method	632
	12.8.4	Schauder's Fixed-Point Theorem	633
	12.8.5	Leray-Schauder Theory	633
	12.8.6	Positive Non-Linear Operators	633
	12.8.7	Monotone Operators in Banach Spaces	634
12.9		Measure and Lebesgue Integral	635
	12.9.1	Sigma Algebra and Measures	635
	12.9.2	Measurable Functions	636
	12.9.2.1	Measurable Function	636
	12.9.2.2	Properties of the Class of Measurable Functions	636
	12.9.3	Integration	637
	12.9.3.1	Definition of the Integral	637
	12.9.3.2	Some Properties of the Integral	637
	12.9.3.3	Convergence Theorems	638
	12.9.4	L^p Spaces	639
	12.9.5	Distributions	639
	12.9.5.1	Formula of Partial Integration	639
	12.9.5.2	Generalized Derivative	640
	12.9.5.3	Distributions	640
	12.9.5.4	Derivative of a Distribution	641
13		Vector Analysis and Vector Fields	642
	13.1	Basic Notions of the Theory of Vector Fields	642
