|          |                                                                                 |     |
|----------|---------------------------------------------------------------------------------|-----|
| <b>1</b> | <b>Introduction: From Linear to Nonlinear Thinking</b>                          | 1   |
| <b>2</b> | <b>Complex Systems and the Evolution of Matter</b>                              | 17  |
| 2.1      | Aristotle's Cosmos and the Logos of Heraclitus                                  | 18  |
| 2.2      | Newton's and Einstein's Universe and the Demon of Laplace                       | 30  |
| 2.3      | Hamiltonian Systems and the Chaos of Heaven<br>and the Quantum World            | 44  |
| 2.4      | Conservative and Dissipative Systems and the Emergence of Order                 | 54  |
| 2.5      | Complex Systems of the Nano World<br>and Self-Constructing Materials            | 71  |
| 2.6      | Time Series Analysis, Fractals, and Multifractals                               | 77  |
| <b>3</b> | <b>Complex Systems and the Evolution of Life</b>                                | 87  |
| 3.1      | From Thales to Darwin                                                           | 87  |
| 3.2      | Boltzmann's Thermodynamics and the Evolution of Life                            | 92  |
| 3.3      | Complex Systems and the Evolution of Organisms                                  | 98  |
| 3.4      | Complex Systems and the Ecology of Populations                                  | 112 |
| 3.5      | Complex Systems and Power Laws of Life                                          | 117 |
| <b>4</b> | <b>Complex Systems and the Evolution of Mind–Brain</b>                          | 123 |
| 4.1      | From Plato's Soul to Lamettrie's "L'Homme machine"                              | 124 |
| 4.2      | Complex Systems and Neural Networks                                             | 132 |
| 4.3      | Brain and the Emergence of Consciousness                                        | 155 |
| 4.4      | Intentionality and the Crocodile in the Brain                                   | 165 |
| 4.5      | Complexity and the Embodied Mind                                                | 174 |
| <b>5</b> | <b>Complex Systems and the Evolution of Computability</b>                       | 179 |
| 5.1      | Leibniz and <i>Mathesis Universalis</i>                                         | 179 |
| 5.2      | Computability and Algorithmic Complexity                                        | 183 |
| 5.3      | Information, Probability, and $1/f$ -Complexity                                 | 194 |
| 5.4      | Stochastic Processes, Probabilistic Attractors,<br>and Probabilistic Complexity | 200 |
| 5.5      | Quantum Information, Quantum Computers,<br>and Quantum Complexity               | 206 |
| 5.6      | Cellular Automata, Chaos, and Randomness                                        | 217 |

|                                                                                                              |     |
|--------------------------------------------------------------------------------------------------------------|-----|
| <b>6 Complex Systems and the Evolution of Artificial Life and Intelligence</b> . . . . .                     | 227 |
| 6.1 Turing and Symbolic Artificial Intelligence . . . . .                                                    | 227 |
| 6.2 Neural Networks and Synergetic Computers . . . . .                                                       | 243 |
| 6.3 Cellular Neural Networks and Analogic Neural Computers . . . . .                                         | 261 |
| 6.4 Universal Cellular Neural Networks and Dynamic Complexity . . . . .                                      | 273 |
| 6.5 Organic Computing, Neurobionics, and Embodied Robotics . . . . .                                         | 285 |
| 6.6 Embodied Artificial Intelligence and Artificial Life . . . . .                                           | 300 |
| <b>7 Complex Systems and the Evolution of Economies</b> . . . . .                                            | 311 |
| 7.1 Smith's Economics and Market Equilibrium . . . . .                                                       | 311 |
| 7.2 Complex Economic Systems, Chaos, and Randomness . . . . .                                                | 321 |
| 7.3 Bachelier's Financial Theory and Market Equilibrium . . . . .                                            | 338 |
| 7.4 Complex Financial Markets, Turbulence, and Power Laws . . . . .                                          | 345 |
| 7.5 Perspectives on Econophysics . . . . .                                                                   | 362 |
| <b>8 Complex Systems and the Evolution of Human Culture and Society</b> . . . . .                            | 367 |
| 8.1 From Aristotle's Polis to Hobbes' Leviathan . . . . .                                                    | 368 |
| 8.2 Complex Social and Cultural Systems . . . . .                                                            | 373 |
| 8.3 Complex Communication Networks, Information Retrieval,<br>and Personalized Information Systems . . . . . | 390 |
| 8.4 Complex Mobile Networks, Ubiquitous Computing,<br>and Adaptive E-Learning . . . . .                      | 405 |
| <b>9 Epilogue on Future, Science, and Ethics</b> . . . . .                                                   | 417 |
| 9.1 Complexity, Forecasts, and the Future . . . . .                                                          | 417 |
| 9.2 Complexity, Science, and Technology . . . . .                                                            | 424 |
| 9.3 Complexity, Responsibility, and Freedom . . . . .                                                        | 430 |
| <b>References</b> . . . . .                                                                                  | 441 |
| <b>Subject Index</b> . . . . .                                                                               | 469 |
| <b>Name Index</b> . . . . .                                                                                  | 479 |
