

---

# Contents

## First Light

<i>A. Loeb</i> .....	1
1 Opening Remarks .....	1
2 Excavating the Universe for Clues About Its History .....	2
3 Background Cosmological Model .....	3
4 Nonlinear Growth .....	36
5 Fragmentation of the First Gaseous Objects to Stars .....	47
6 Supermassive Black Holes .....	72
7 Radiative Feedback from the First Sources of Light .....	82
8 Feedback from Galactic Outflows .....	102
9 The Frontier of 21 cm Cosmology .....	113
10 Major Challenge for Future Theoretical Research .....	137
References .....	150

## Cosmological Feedbacks from the First Stars

<i>A. Ferrara</i> .....	161
1 Star Formation in Primordial Gas .....	162
2 The Initial Mass Function .....	170
3 First Stars .....	180
4 Observational Signatures of First Stars .....	191
5 Blastwaves and Winds .....	203
6 Mechanical Feedbacks in Cosmology .....	210
7 Additional Feedback Processes .....	228
8 Early Cosmic Dust .....	236
9 The Intergalactic Medium .....	248
References .....	256

## Observations of the High Redshift Universe

<i>R. S. Ellis</i> .....	259
1 Role of Observations in Cosmology & Galaxy Formation .....	259
2 Galaxies & The Hubble Sequence .....	272

VIII Contents

3	Cosmic Star Formation Histories .....	283
4	Stellar Mass Assembly .....	295
5	Witnessing the End of Cosmic Reionization.....	311
6	Into the Dark Ages: Lyman Dropouts .....	320
7	Lyman Alpha Emitters and Gravitational Lensing .....	330
8	Cosmic Infrared Background .....	344
9	Epilogue: Future Prospects .....	353
	References .....	359
	<b>Acknowledgments</b> .....	<b>365</b>
	<b>Index</b> .....	<b>367</b>
