Section I Genome-wide and Genome-based Research

I.1 The Rice Genome Sequence as an Indispensable Tool for Crop Improvement	3
Takuji Sasaki, Jianzhong Wu, Hiroshi Mizuno, Baltazar A. Antonio, and Takashi Matsumoto	
1 Introduction	3
2 Major Features of the Rice Genome	4
3 Comparative Analysis of Genome Structure Within <i>Oryza sativa</i> ...	6
4 Comparative Analysis of Genome Structure in the Genus <i>Oryza</i>	7
5 Comparative Analysis of Genome Structure in the Grass Family	9
6 Conclusion.....	10
References	11
I.2 Bioinformatics and Database of the Rice Genome	13
Hisataka Numa, Tsuyoshi Tanaka, and Takeshi Itoh	
1 Introduction	13
2 Gene-finding in the Rice Genome.....	13
3 Comparison of Gene Prediction Programs.....	14
4 Prediction of Gene Functions.....	16
5 The Rice Annotation Project Database	17
References	20
I.3 Sequencing-based Measurements of mRNA and Small RNA	23
Kan Nobuta and Blake C. Meyers	
1 Introduction	23
2 mRNA MPSS Data.....	25
3 Small RNA MPSS	32
4 Conclusion.....	34
References	35

I.4	Microarray-based Approaches to Rice Transcriptome Analysis	37
	Lei Li and Xing Wang Deng	
	1 Introduction	37
	2 Microarray Platforms and Methods	37
	3 Applications of Microarrays in Rice Transcriptome Analysis.....	39
	4 Technical Challenges and Resources for Using Rice Microarray Systems	45
	5 Future Perspectives	48
	References	49
I.5	High-throughput Transcriptome Analysis in Rice from a Genomic Perspective.....	53
	Shoshi Kikuchi	
	1 Introduction	53
	2 The Rice Transcriptome: From EST Collection to cDNA-based Microarray Systems.....	53
	3 Rice Full-length cDNA Clone Collection Project.....	55
	4 Oligoarray Systems	61
	5 Gene Family Analysis	63
	6 Future Perspectives	64
	References	65
I.6	Active Transposons in Rice.....	69
	Tetsuya Nakazaki, Ken Naito, Yutaka Okumoto, and Takatoshi Tanisaka	
	1 Introduction	69
	2 Detection of Transposon Sequences in Rice	70
	3 Active Transposons of Rice	72
	4 Conclusion.....	77
	References	77
I.7	Homologous Recombination-dependent Gene Targeting and an Active DNA Transposon <i>nDart</i>-promoted Gene Tagging for Rice Functional Genomics	81
	Yasuyo Johzuka-Hisatomi, Masahiko Maekawa, Kyoko Takagi, Chang-Ho Eun, Takaki Yamauchi, Zenpei Shimatani, Nisar Ahmed, Hiroko Urawa, Kazuo Tsugane, Rie Terada, and Shigeru Iida	
	1 Introduction	81
	2 Homologous Recombination-dependent Gene Targeting	84
	3 Active DNA Transposon <i>nDart</i> -promoted Gene Tagging.....	89
	4 Current Status and Future Prospects	91
	References	92

I.8 T-DNA Tagging Lines	95
Gynheung An	
1 Introduction.....	95
2 Generation of T-DNA Insertional Mutants	95
3 Generation of Activation-tagging Mutants.....	96
4 Entrapment Tagging	98
5 DNA Pool Screening for Reverse Genetics.....	99
6 Establishment of Flanking Sequence Tag (FST) Databases.....	100
7 Obstacles in T-DNA Insertional Mutagenesis.....	103
8 Future Prospects	103
References	104
I.9 Frequent DNA Transfer Among Mitochondrial, Plastid and Nuclear Genomes of Rice During Evolution	107
Mikio Nakazono and Atsushi Hirai	
1 Introduction.....	107
2 Plastid-to-Mitochondrion DNA Transfer Events	109
3 Mitochondrion-to-Nucleus or Plastid-to-Nucleus DNA Transfer Events.....	110
4 DNA Segments Found Commonly in all Three Genomes	113
5 Nucleus-to-Mitochondrion DNA Transfer Events	114
6 Conclusions and Future Perspectives	114
References	115
Section II Signal Transduction and Development	
II.1 Hormonal Signal Transduction in Rice	121
Ayako Nakamura and Makoto Matsuoka	
1 Introduction.....	121
2 GA Signaling in Rice.....	122
3 Brassinosteroid Signaling in Rice.....	126
4 Auxin Signaling in Rice.....	129
5 Future Perspectives	131
References.....	132
II.2 Rice Heterotrimeric G Protein Signaling	135
Yukimoto Iwasaki, Hisaharu Kato, Yukiko Fujisawa, and Katsuyuki Oki	
1 Introduction.....	135
2 Genes and Translation Products for Rice Heterotrimeric G Proteins.....	135
3 Mutants with Defects in the Subunit genes Encoding Plant Heterotrimeric G Proteins.....	138

4	Analysis of Signaling Mediated by Rice Heterotrimeric G Proteins Using a Constitutively Active Form of the α Subunit	138
5	Molecules Interacting with <i>Arabidopsis</i> G α	139
6	Signaling Pathways Mediated by Plant Heterotrimeric G Proteins.....	141
7	Further Perspectives.....	145
	References.....	146
II.3	Genetic Control of Embryogenesis in Rice	149
	Yutaka Sato	
1	Introduction.....	149
2	Molecular Markers Used in the Analysis of Rice Embryogenesis ..	152
3	Analysis of Organogenesis During Embryogenesis	153
4	Future Perspectives	158
	References.....	158
II.4	Photoperiodic Flowering in Rice	163
	Takeshi Izawa	
1	Introduction	163
2	The Importance of Photoreception for Photoperiodic Flowering in Rice	164
3	Quantitative Trait Loci Analyses Reveal the Conserved Floral Pathway	165
4	A Unique Floral Pathway Exists in Rice.....	166
5	The Importance of Floral Inhibition Control Under Long-day Conditions.....	167
6	Night-break Experiments in Rice	169
7	The Roles of Circadian Clocks in Floral Induction in Rice Are Still Unknown	170
8	Differences Between Long-day and Short-day Plants.....	171
9	Future Perspectives.....	173
	References	174
II.5	Genetic Regulation of Meristem Maintenance and Organ Specification in Rice Flower Development.....	177
	Hiro-Yuki Hirano	
1	Introduction.....	177
2	Structure of the Inflorescence and Flower in Rice.....	178
3	Floral Meristem	179
4	Floral Organ Development	183
5	Future Perspectives	186
	References.....	187

II.6 Genetic Dissection of Sexual Reproduction in Rice (<i>Oryza sativa</i> L.)	191
Ken-Ichi Nonomura and Shinichiro Yamaki	
1 Introduction.....	191
2 Reproductive Organ Development.....	192
3 Sporogenesis.....	195
4 Meiosis.....	196
5 Gametogenesis.....	200
6 Future Perspectives on Studies in Rice Sexual Reproduction	201
References.....	202
II.7 Molecular Studies on Cytoplasmic Male Sterility-associated Genes and Restorer Genes in Rice	205
Sota Fujii, Tomohiko Kazama, and Kinya Toriyama	
1 Introduction.....	205
2 Types of CMS in Rice.....	205
3 Mitochondrial Chimeric Genes.....	208
4 Molecular Cloning of <i>Rf1</i> and Molecular Mapping of Other <i>Rf</i> Genes.....	210
5 Approaches Toward Understanding the Mechanism of CMS Induction	213
6 Conclusion	214
References.....	214
Section III Evolution and Ecology	
III.1 Phylogeny and Biogeography of the Genus <i>Oryza</i>	219
Duncan A. Vaughan, Song Ge, Akito Kaga, and Norihiko Tomooka	
1 Introduction.....	219
2 Phylogeny.....	220
3 <i>Oryza</i> Biogeography	225
References.....	231
III.2 Chromosome and Genome Evolution in Rice	235
Nori Kurata	
1 Introduction.....	235
2 Chromosomes in the Different Genomes.....	235
3 Classification of Genomes Based on Chromosome Pairing.....	237
4 Genome Duplication in the Genus <i>Oryza</i>	239
5 Genome-wide Evolution Among <i>Oryza</i> Species: Genome Size, Retrotransposon and Centromere	240
6 Regional Genome Evolution Among <i>Oryza</i> Species	241

7 Genome Evolution in the Poaceae Family	242
References	243
III.3 Genetics of Speciation in Rice	247
Yohei Koide, Kazumitsu Onishi, Akira Kanazawa, and Yoshio Sano	
1 Introduction	247
2 Genetic Mechanisms of Post-mating Barriers	248
3 Evolution of Reproductive Isolation	254
4 Conclusions and Perspectives	256
References	256
III.4 Genetic Diversity in Wild Relatives of Rice and Domestication Events	261
Hong-Wei Cai, Masahiro Akimoto, and Hiroko Morishima	
1 Introduction	261
2 Genetic Diversity of AA-genome Wild Taxa	262
3 Differentiation Within <i>O. rufipogon</i>	265
4 Genetics of Domestication	268
References	273
III.5 Rice Retroposon, <i>p-SINE</i>, and Its Use for Classification and Identification of <i>Oryza</i> Species	277
Hisako Ohtsubo, Suguru Tsuchimoto, Jian-Hong Xu, Chaoyang Cheng, Marcia Y. Koudo, Nori Kurata, and Eiichi Ohtsubo	
1 Introduction	277
2 <i>p-SINE</i> Families in the <i>Oryza</i> Genus	278
3 Phylogenetic Analysis of <i>Oryza</i> Species Based on SINE Insertion Analysis	280
4 “SINE Code” Is an Excellent Tool for Identification of <i>Oryza</i> Species	285
5 Final Remarks	288
6 Future Perspectives	289
References	289
Section IV Improvement of Rice	
IV.1 Detection and Molecular Cloning of Genes Underlying Quantitative Phenotypic Variations in Rice	295
Toshio Yamamoto and Masahiro Yano	
1 Introduction	295
2 Molecular Cloning of Major QTLs with Agronomic Values	295

Contents	xiii
3 Identification of Major QTLs with Agronomic Value.....	299
4 Systematic Genetic and Molecular Analysis and Utilization of Natural Variations	302
5 Future Prospects	305
References	306
IV.2 Rice Yielding and Plant Hormones	309
Motoyuki Ashikari and Tomoaki Sakamoto	
1 Introduction	309
2 Breeding of Semi-dwarf Rice Varieties Led to Dramatically Increased Grain Production	310
3 Gibberellins Regulate Plant Height.....	310
4 Brassinosteroids Control Leaf Angle and Biomass Production	314
5 Cytokinins Regulate Grain Number.....	315
6 Future Perspectives: Accumulation of Yielding-related Genes for Breeding.....	316
References	318
IV.3 Regulation of Iron and Zinc Uptake and Translocation in Rice	321
Takanori Kobayashi and Naoko K. Nishizawa	
1 Iron (Fe) and Zinc (Zn) Uptake from the Rhizosphere Mediated by Mugineic Acid Family Phytosiderophores (MAs)	321
2 Uptake of Fe ²⁺ and Zn ²⁺ Ions from the Rhizosphere	326
3 Fe and Zn Translocation Inside the Plant Body	327
4 Regulation of Expression of Fe Uptake-related Genes	330
5 Future Perspectives	332
References	332
IV.4 Abiotic Stress	337
Takayuki Ohnishi, Mikio Nakazono, and Nobuhiro Tsutsumi	
1 Introduction	337
2 Signal Transduction.....	337
3 Particular Stresses	345
4 Future Perspectives	351
References	352

IV.5 Health-promoting Transgenic Rice: Application of Rice Seeds as a Direct Delivery System for Bioactive Peptides in Human Health	357
Fumio Takaiwa, Lijun Yang, and Hiroshi Yasuda	
1 Introduction	357
2 Plant Production System as a Bioreactor for Foreign Recombinant Proteins	358
3 Characteristics of the Rice Seed Production System as a Bioreactor	358
4 Production Tools Required for Expression of Recombinant Proteins or Peptides in Rice Seed.....	359
5 Creation of Functional Foods that Contribute to Human Health	363
References	371
Index	375
