<b>1</b>	<b>Basics of Nonlinear and Chaotic Dynamics</b>	<b>1</b>
1.1	Introduction to Chaos Theory	1
1.2	Basics of Attractor and Chaotic Dynamics	16
1.3	Brief History of Chaos Theory	25
1.3.1	Poincaré’s Qualitative Dynamics, Topology and Chaos	26
1.3.2	Smale’s Topological Horseshoe and Chaos of Stretching and Folding	34
1.3.3	Lorenz’ Weather Prediction and Chaos	44
1.3.4	Feigenbaum’s Constant and Universality	47
1.3.5	May’s Population Modelling and Chaos	48
1.3.6	Hénon’s Special 2D Map and Its Strange Attractor	52
1.4	More Chaotic and Attractor Systems	55
1.5	Continuous Chaotic Dynamics	67
1.5.1	Dynamics and Non–Equilibrium Statistical Mechanics	69
1.5.2	Statistical Mechanics of Nonlinear Oscillator Chains	82
1.5.3	Geometrical Modelling of Continuous Dynamics	84
1.5.4	Lagrangian Chaos	86
1.6	Standard Map and Hamiltonian Chaos	95
1.7	Chaotic Dynamics of Binary Systems	101
1.7.1	Examples of Dynamical Maps	103
1.7.2	Correlation Dimension of an Attractor	107
1.8	Spatio–Temporal Chaos and Turbulence in PDEs	108
1.8.1	Turbulence	108
1.8.2	Sine–Gordon Equation	113
1.8.3	Complex Ginzburg–Landau Equation	114
1.8.4	Kuramoto–Sivashinsky System	115
1.8.5	Burgers Dynamical System	116
1.8.6	2D Kuramoto–Sivashinsky Equation	118
1.9	Basics of Chaos Control	124
1.9.1	Feedback and Non–Feedback Algorithms for Chaos Control	124

1.9.2	Exploiting Critical Sensitivity . . . . .	127
1.9.3	Lyapunov Exponents and Kaplan–Yorke Dimension . . . . .	129
1.9.4	Kolmogorov–Sinai Entropy . . . . .	131
1.9.5	Chaos Control by Ott, Grebogi and Yorke (OGY) . . . . .	132
1.9.6	Floquet Stability Analysis and OGY Control . . . . .	135
1.9.7	Blind Chaos Control . . . . .	139
1.9.8	Jerk Functions of Simple Chaotic Flows . . . . .	143
1.9.9	Example: Chaos Control in Molecular Dynamics . . . . .	146
1.10	Spatio-Temporal Chaos Control . . . . .	155
1.10.1	Models of Spatio-Temporal Chaos in Excitable Media . . . . .	158
1.10.2	Global Chaos Control . . . . .	160
1.10.3	Non-Global Spatially Extended Control . . . . .	163
1.10.4	Local Chaos Control . . . . .	165
1.10.5	Spatio-Temporal Chaos–Control in the Heart . . . . .	166
<b>2</b>	<b>Phase Transitions and Synergetics . . . . .</b>	<b>173</b>
2.1	Introduction to Phase Transitions . . . . .	173
2.1.1	Equilibrium Phase Transitions . . . . .	173
2.1.2	Classification of Phase Transitions . . . . .	175
2.1.3	Basic Properties of Phase Transitions . . . . .	176
2.1.4	Landau’s Theory of Phase Transitions . . . . .	179
2.1.5	Example: Order Parameters in Magnetite Phase Transition . . . . .	180
2.1.6	Universal Mandelbrot Set as a Phase–Transition Model	183
2.1.7	Oscillatory Phase Transition . . . . .	187
2.1.8	Partition Function and Its Path–Integral Description . . . . .	192
2.1.9	Noise–Induced Non–Equilibrium Phase Transitions . . . . .	199
2.1.10	Noise–Driven Ferromagnetic Phase Transition . . . . .	206
2.1.11	Phase Transition in a Reaction–Diffusion System . . . . .	218
2.1.12	Phase Transition in Negotiation Dynamics . . . . .	224
2.2	Elements of Haken’s Synergetics . . . . .	229
2.2.1	Phase Transitions and Synergetics . . . . .	231
2.2.2	Order Parameters in Human/Humanoid Biodynamics . . . . .	233
2.2.3	Example: Synergetic Control of Biodynamics . . . . .	236
2.2.4	Example: Chaotic Psychodynamics of Perception . . . . .	237
2.2.5	Kick Dynamics and Dissipation–Fluctuation Theorem . . . . .	241
2.3	Synergetics of Recurrent and Attractor Neural Networks . . . . .	244
2.3.1	Stochastic Dynamics of Neuronal Firing States . . . . .	246
2.3.2	Synaptic Symmetry and Lyapunov Functions . . . . .	251
2.3.3	Detailed Balance and Equilibrium Statistical Mechanics	253
2.3.4	Simple Recurrent Networks with Binary Neurons . . . . .	259
2.3.5	Simple Recurrent Networks of Coupled Oscillators . . . . .	267
2.3.6	Attractor Neural Networks with Binary Neurons . . . . .	275
2.3.7	Attractor Neural Networks with Continuous Neurons . . . . .	287
2.3.8	Correlation– and Response–Functions . . . . .	293

<b>3</b>	<b>Geometry and Topology Change in Complex Systems</b>	305
3.1	Riemannian Geometry of Smooth Manifolds	305
3.1.1	Riemannian Manifolds: an Intuitive Picture	305
3.1.2	Smooth Manifolds and Their (Co)Tangent Bundles	317
3.1.3	Local Riemannian Geometry	328
3.1.4	Global Riemannian Geometry	338
3.2	Riemannian Approach to Chaos	343
3.2.1	Geometrization of Newtonian Dynamics	345
3.2.2	Geometric Description of Dynamical Instability	347
3.2.3	Examples	361
3.3	Morse Topology of Smooth Manifolds	368
3.3.1	Intro to Euler Characteristic and Morse Topology	368
3.3.2	Sets and Topological Spaces	371
3.3.3	A Brief Intro to Morse Theory	380
3.3.4	Morse Theory and Energy Functionals	382
3.3.5	Morse Theory and Riemannian Geometry	384
3.3.6	Morse Topology in Human/Humanoid Biodynamics	388
3.3.7	Cobordism Topology on Smooth Manifolds	392
3.4	Topology Change in 3D	394
3.4.1	Attaching Handles	396
3.4.2	Oriented Cobordism and Surgery Theory	402
3.5	Topology Change in Quantum Gravity	405
3.5.1	A Top–Down Framework for Topology Change	405
3.5.2	Morse Metrics and Elementary Topology Changes	406
3.5.3	‘Good’ and ‘Bad’ Topology Change	408
3.5.4	Borde–Sorkin Conjecture	410
3.6	A Handle–Body Calculus for Topology Change	411
3.6.1	Handle-body Decompositions	414
3.6.2	Instantons in Quantum Gravity	418
<b>4</b>	<b>Nonlinear Dynamics of Path Integrals</b>	425
4.1	Sum over Histories	425
4.1.1	Intuition Behind a Path Integral	426
4.1.2	Basic Path–Integral Calculations	437
4.1.3	Brief History of Feynman’s Path Integral	445
4.1.4	Path–Integral Quantization	452
4.1.5	Statistical Mechanics via Path Integrals	460
4.1.6	Path Integrals and Green’s Functions	462
4.1.7	Monte Carlo Simulation of the Path Integral	468
4.2	Sum over Geometries and Topologies	474
4.2.1	Simplicial Quantum Geometry	475
4.2.2	Discrete Gravitational Path Integrals	477
4.2.3	Regge Calculus	479
4.2.4	Lorentzian Path Integral	481
4.2.5	Non-Perturbative Quantum Gravity	486

4.3	Dynamics of Fields and Strings . . . . .	511
4.3.1	Topological Quantum Field Theory . . . . .	511
4.3.2	TQFT and Seiberg–Witten Theory . . . . .	515
4.3.3	Stringy Actions and Amplitudes . . . . .	528
4.3.4	Transition Amplitudes for Strings . . . . .	532
4.3.5	Weyl Invariance and Vertex Operator Formulation . . . . .	535
4.3.6	More General Stringy Actions . . . . .	535
4.3.7	Transition Amplitude for a Single Point Particle . . . . .	536
4.3.8	Witten’s Open String Field Theory . . . . .	537
4.3.9	Topological Strings . . . . .	554
4.3.10	Geometrical Transitions . . . . .	569
4.3.11	Topological Strings and Black Hole Attractors . . . . .	572
4.4	Chaos Field Theory . . . . .	578
4.5	Non–Physical Applications of Path Integrals . . . . .	580
4.5.1	Stochastic Optimal Control . . . . .	580
4.5.2	Nonlinear Dynamics of Option Pricing . . . . .	584
4.5.3	Dynamics of Complex Networks . . . . .	594
4.5.4	Path–Integral Dynamics of Neural Networks . . . . .	596
4.5.5	Cerebellum as a Neural Path–Integral . . . . .	617
4.5.6	Dissipative Quantum Brain Model . . . . .	623
4.5.7	Action–Amplitude Psychodynamics . . . . .	637
4.5.8	Joint Action Psychodynamics . . . . .	651
4.5.9	General Adaptation Psychodynamics . . . . .	654
<b>5</b>	<b>Complex Nonlinearity: Combining It All Together . . . . .</b>	<b>657</b>
5.1	Geometrical Dynamics, Hamiltonian Chaos, and Phase Transitions . . . . .	657
5.2	Topology and Phase Transitions . . . . .	664
5.2.1	Computation of the Euler Characteristic . . . . .	666
5.2.2	Topological Hypothesis . . . . .	668
5.3	A Theorem on Topological Origin of Phase Transitions . . . . .	670
5.4	Phase Transitions, Topology and the Spherical Model . . . . .	673
5.5	Topology Change and Causal Continuity . . . . .	680
5.5.1	Morse Theory and Surgery . . . . .	682
5.5.2	Causal Discontinuity . . . . .	687
5.5.3	General 4D Topology Change . . . . .	689
5.5.4	A Black Hole Example . . . . .	690
5.5.5	Topology Change and Path Integrals . . . . .	692
5.6	‘Hard’ vs. ‘Soft’ Complexity: A Bio–Mechanical Example . . . . .	693
5.6.1	Bio–Mechanical Complexity . . . . .	694
5.6.2	Dynamical Complexity in Bio–Mechanics . . . . .	697
5.6.3	Control Complexity in Bio–Mechanics . . . . .	700
5.6.4	Computational Complexity in Bio–Mechanics . . . . .	705
5.6.5	Simplicity, Predictability and ‘Macro–Entanglement’ . . . . .	706

5.6.6	Reduction of Mechanical DOF and Associated Controllers .....	707
5.6.7	Self-Assembly, Synchronization and Resolution .....	709
