Introduction	1
References	9
1 Observation of Rogue Waves	11
1.1 Historical Notes and Modern Testimonies	11
1.2 Instrumental Registrations and Related Problems	20
1.2.1 Keystones of the Rogue Wave Measurements	20
1.2.2 Time-Series with Rogue Wave Occurrence	22
1.2.3 SAR Registrations of Rogue Waves	26
1.3 Sea States	26
References	29
2 Deterministic and Statistical Approaches for Studying Rogue Waves	33
2.1 Deterministic Equations	34
2.1.1 Mass and Momentum Conservation Equations	34
2.1.2 Boundary Conditions	37
2.1.3 Linearization: Equations for Small Amplitude Waves	38
2.1.4 Dispersion Relation	40
2.2 Statistical Description	43
2.2.1 The Rayleigh Probability	44
2.2.2 Wave Spectra	48
2.2.3 Kinetic Models	53
2.3 Possible Physical Mechanisms of Rogue Wave Generation	56
2.3.1 Wave-Current Interaction	57
2.3.2 Geometrical or Spatial Focusing	58
2.3.3 Focusing Due to Dispersion: The Spatio-Temporal Focusing	58
2.3.4 Focusing Due to Modulational Instability	58
2.3.5 Soliton Collision	58
References	60
3 Quasi-Linear Wave Focusing	63
3.1 Geometrical Focusing of Water Waves	63
3.2 Dispersive Enhancement of Wave Trains	69

3.2.1	Exact Solution for the Delta-Function	72
3.2.2	Exact Solution for a Gaussian Wave Train	73
3.3	Wave Focusing Under the Action of Wind	78
3.4	Wave-Current Interaction as a Mechanism of Rogue Waves	81
	References	87
4	Rogue Waves in Waters of Infinite and Finite Depths	91
4.1	The Modulational Instability	92
4.1.1	Within the Framework of the Fully Nonlinear Equations	92
4.1.2	Within the Framework of the Nonlinear Schrödinger (NLS) Equation	95
4.2	Rogue Wave Phenomenon within the Framework of the NLS Equation	105
4.2.1	General Solution of the Cauchy Problem	106
4.2.2	Nonlinear-Dispersive Formation of a Rogue Wave	107
4.2.3	Solitons on a Background and Unstable Modes	111
4.3	Rogue Wave Simulations within the Framework of the Fully Nonlinear Equations	117
4.3.1	A High-Order Spectral Method	117
4.3.2	A Boundary Integral Equation Method	120
4.3.3	Numerical Simulation of Rogue Waves Due to Modulational Instability	121
4.3.4	Numerical Simulation of Rogue Waves Due to Dispersive Focusing in the Presence of Wind and Current	130
4.3.5	Numerical Simulation of Rogue Waves Due to Envelope-Soliton Collision	135
4.4	Statistical Approach for Rogue Waves	140
4.5	Laboratory Experiments of Dispersive Wave Trains with and without Wind	143
4.6	Three-Dimensional Rogue Waves	147
4.7	In Situ Rogue Waves	154
4.7.1	Nonlinear Analysis of Measured Rogue Wave Time Series	155
4.7.2	Statistics from Registrations of Natural Rogue Waves	162
	References	165
5	Shallow-Water Rogue Waves	173
5.1	Nonlinear Models of Shallow-Water Waves	173
5.2	Nonlinear-Dispersive Focusing of Unidirectional Shallow-Water Wave Fields	177
5.3	Numerical Modeling of Irregular Wave Fields in Shallow Water (KdV Framework)	184
5.4	Three-Dimensional Rogue Waves in Shallow Water	191
5.5	Anomalous High Waves on a Beach	198
5.5.1	Waves at Vertical Walls	199
5.5.2	Wave Run-up on a Plane Beach	203
