PDEs in Conformal Geometry	1
Matthew J. Gursky	
1 Introduction	1
2 Some Background from Riemannian Geometry	2
2.1 Some Differential Operators	2
3 Some Background from Elliptic Theory	6
4 Background from Conformal Geometry	10
5 A Fully Nonlinear Yamabe Problem	15
5.1 Ellipticity	17
5.2 From Lower to Higher Order Estimates	18
5.3 An Existence Result: Four Dimensions	19
6 The Functional Determinant	22
6.1 The Case of Surfaces	23
6.2 Four Dimensions	24
6.3 The Euler Equation	27
6.4 Existence of Extremals	28
6.5 Sketch of the Proof	30
References	32
Heat Kernels in Sub-Riemannian Settings	35
Ermanno Lanconelli	
1 Lecture Topics	35
2 A Motivation: Levi Curvatures and Motion by Levi Curvatures	38
3 Heat Kernels and Gaussian Bounds: Past History	40
4 Carnot-Carathéodory metric	42
5 Heat-Type Operators with Constant Coefficients	43
6 Heat-Type Operators with Variable Coefficients.	
The Levi Parametrix Method	45
7 Hadamard-Pini Invariant Harnack Inequality	49
References	60

Concentration of Solutions for Some Singularly Perturbed Neumann Problems	63
Andrea Malchiodi	
1 Introduction	63
Part I Concentration at Points	
2 Perturbation in Critical Point Theory	70
2.1 The Finite-Dimensional Reduction.....	71
2.2 Existence of Critical Points	73
3 Application to the Study of \tilde{P}_ϵ	76
3.1 Study of $Ker[\bar{I}''(U)]$ and $Ker[\bar{I}_+''(U)]$	76
3.2 Proof of Theorem 1.....	81
3.3 Proof of Theorem 2.....	85
Part II Higher-Dimensional Concentration	
4 Some Preliminary Facts	96
5 An Approximate Solution	104
6 Eigenvalues of the Linearized Equation.....	107
7 Proof of Theorem 3	111
References	113
On Some Elliptic Problems in the Study of Selfdual Chern-Simons Vortices	117
Gabriella Tarantello	
1 Introduction	117
2 The Abelian-Higgs Model and The Chern-Simons-Higgs Model	119
3 Selfduality	123
4 On the Elliptic Problem Concerning Abelian-Higgs Vortices.....	132
5 On the Elliptic Problem of Selfdual Chern-Simons Vortices	145
5.1 Topological Chern-Simons Vortices	147
5.2 Non Topological Chern-Simons Vortices	154
References	166
The k-Hessian Equation	177
Xu-Jia Wang	
1 Introduction	177
2 Admissible Functions	180
2.1 Admissible Functions	180
2.2 Admissible Solution is Elliptic	181
2.3 Concavity	182
2.4 A Geometric Assumption on the Boundary	182
2.5 Some Algebraic Inequalities.....	183

3	The Dirichlet Problem	184
3.1	A priori Estimates	184
3.2	Regularity for Fully Nonlinear, Uniformly Elliptic Equation	188
3.3	Existence of Smooth Solutions	189
3.4	Remarks	190
4	Interior a Priori Estimates	191
4.1	Interior Gradient Estimate	191
4.2	Harnack Inequality	192
4.3	Interior Second Derivative Estimate	194
5	Sobolev Type Inequalities	198
5.1	Sobolev Type Inequalities	199
5.2	Compactness	204
5.3	An L^∞ Estimate	205
6	Variational Problems	208
6.1	The Sublinear Growth Case	209
6.2	The Eigenvalue Problem	210
6.3	Superlinear Growth Case	212
6.4	The Critical Growth Case	218
7	Hessian Integral Estimates	224
7.1	A Basic Estimate	224
7.2	Local Integral Gradient Estimates	225
8	Hessian Measures	230
8.1	Non-Smooth k -Admissible Functions	230
8.2	Perron Lifting	232
8.3	Weak Continuity	234
8.4	The Dirichlet Problem	236
9	Local Behavior of Admissible Functions	239
9.1	The Wolff Potential Estimate	239
9.2	Hölder Continuity of Weak Solutions	241
10	Parabolic Hessian Equations	243
11	Examples of Fully Nonlinear Elliptic Equations	248
