Preface	xi
I Finite-dimensional Classic Spectral Theory	
Part I: Summary	2
1 The Jordan Theorem	
1.1 Basic concepts	3
1.2 The Jordan theorem	8
1.3 The Jordan canonical form	19
1.4 The real canonical form	23
1.5 An example	26
1.5.1 The complex Jordan form of A	29
1.5.2 The real Jordan form of A	30
1.6 Exercises	31
1.7 Comments on Chapter 1	35
2 Operator Calculus	
2.1 Norm of a linear operator	38
2.2 Introduction to operator calculus	41
2.3 Resolvent operator. Dunford's integral formula	45
2.4 The spectral mapping theorem	51
2.5 The exponential matrix	53
2.6 An example	56
2.7 Exercises	58
2.8 Comments on Chapter 2	62

3 Spectral Projections	
3.1 Estimating the inverse of a matrix	63
3.2 Vector-valued Laurent series	65
3.3 The eigenvalues are poles of the resolvent	66
3.4 Spectral projections	68
3.5 Exercises	70
3.6 Comments on Chapter 3	72
II Algebraic Multiplicities	
Part II: Summary	76
4 Algebraic Multiplicity Through Transversalization	
4.1 Motivating the concept of transversality	84
4.2 The concept of transversal eigenvalue	87
4.3 Algebraic eigenvalues and transversalization	89
4.4 Perturbation from simple eigenvalues	99
4.5 Exercises	103
4.6 Comments on Chapter 4	105
5 Algebraic Multiplicity Through Polynomial Factorization	
5.1 Derived families and factorization	108
5.2 Connections between χ and μ	114
5.3 Coincidence of the multiplicities χ and μ	118
5.4 A formula for the partial μ -multiplicities	121
5.5 Removable singularities	122
5.6 The product formula	123
5.7 Perturbation from simple eigenvalues revisited	130
5.8 Exercises	132
5.9 Comments on Chapter 5	136
6 Uniqueness of the Algebraic Multiplicity	
6.1 Similarity of rank-one projections	141
6.2 Proof of Theorem 6.0.1	142
6.3 Relaxing the regularity requirements	144
6.4 A general uniqueness theorem	147
6.5 Applications. Classical multiplicity formulae	148
6.6 Exercises	151
6.7 Comments on Chapter 6	152

7 Algebraic Multiplicity Through Jordan Chains. Smith Form	
7.1 The concept of Jordan chain	155
7.2 Canonical sets and κ -multiplicity	157
7.3 Invariance by continuous families of isomorphisms	161
7.4 Local Smith form for \mathcal{C}^∞ matrix families	167
7.5 Canonical sets at transversal eigenvalues	171
7.6 Coincidence of the multiplicities κ and χ	174
7.7 Labeling the vectors of the canonical sets	180
7.8 Characterizing the existence of the Smith form	181
7.9 Two illustrative examples	189
7.9.1 Example 1	189
7.9.2 Example 2	191
7.10 Local equivalence of operator families	193
7.11 Exercises	199
7.12 Comments on Chapter 7	204
8 Analytic and Classical Families. Stability	
8.1 Isolated eigenvalues	210
8.2 The structure of the spectrum	211
8.3 Classic algebraic multiplicity	212
8.4 Stability of the complex algebraic multiplicity	215
8.4.1 Local stability	216
8.4.2 Global stability	218
8.4.3 Homotopy invariance	220
8.5 Exercises	220
8.6 Comments on Chapter 8	222
9 Algebraic Multiplicity Through Logarithmic Residues	
9.1 Finite Laurent developments of \mathfrak{L}^{-1}	226
9.2 The trace operator	229
9.2.1 Concept of trace and basic properties	230
9.2.2 Traces of the coefficients of the product of two families	231
9.3 The multiplicity through a logarithmic residue	233
9.4 Holomorphic and classical families	237
9.5 Spectral projection	238
9.6 Exercises	241
9.7 Comments on Chapter 9	246

10 The Spectral Theorem for Matrix Polynomials	
10.1 Linearization of a matrix polynomial	250
10.2 Generalized Jordan theorem	252
10.3 Remarks on scalar polynomials	255
10.4 Constructing a basis in the phase space	256
10.5 Exercises	262
10.6 Comments on Chapter 10	263
11 Further Developments of the Algebraic Multiplicity	
11.1 General Fredholm operator families	265
11.2 Meromorphic families	266
11.3 Unbounded operators	267
11.4 Non-Fredholm operators	269
III Nonlinear Spectral Theory	
Part III: Summary	272
12 Nonlinear Eigenvalues	
12.1 Bifurcation values. Nonlinear eigenvalues	275
12.2 A short introduction to the topological degree	278
12.2.1 Existence and uniqueness	279
12.2.2 Computing the degree. Analytic construction	281
12.2.3 The fixed point theorem of Brouwer, Schauder and Tychonoff	283
12.2.4 Further properties	284
12.3 The algebraic multiplicity as an indicator of the change of index	284
12.4 Characterization of nonlinear eigenvalues	286
12.5 Comments on Chapter 12	291
Bibliography	295
Notation	303
Index	307
