Preface	v
Contents	vii
List of figures	xi
List of tables	xiii
Abbreviations	xv
Symbols	xvii
I Introduction	1
I.1 Motivation and challenges	1
I.2 Objectives and focal research questions	6
I.3 Classification and organization	9
References	13
II Strategic framework	15
II.R1 A theory of software reuse strategies in ideal type stable and turbulent market environments	17
1 Introduction and objectives	18
2 Basic software reuse options	20
2.1 Compositional reuse – building blocks	21
2.2 Generative reuse – solution patterns	21
3 Two ideal type market environments and their business strategy	22
3.1 Traditional environments – defenders	23
3.1.1 Defensive internal improvement strategies	23
3.1.2 Defenders’ dilemma	24
3.2 Turbulent environments – prospectors	25
3.2.1 Prospective rapid adaptation strategies	25
3.2.2 Prospectors’ dilemma	26
4 Supporting experience: projects from practice	27
4.1 Stable environment – fraud detection	27
4.2 Turbulent environment – software simulator	27
4.3 Hybrid environment – portal architecture	28
5 Concluding hypotheses, limitations and further steps	28
References	30
II.R2 Integration assessment of an individually developed application vs. software packages from the market – an experience report	33
1 Introduction and setting	34
2 Project approach and selected results	36
2.1 Functional comparison of available packages	37
2.2 Integration scenario case studies	39

3	Conclusion and remarks	43
	References	43
III	Specification.....	45
III.R3	The importance of requirements specifications for successful IT projects	47
1	Requirements specifications in the development process	48
2	Success factors	48
2.1	Systematic approach	49
2.2	Detailed analysis and documentation	50
2.3	Realistic effort estimations	51
2.4	Integration of missing expertise.....	51
2.5	Coordination and alignment.....	52
2.6	Joint and active organization	52
2.7	Efficient change management.....	53
3	Risks	53
3.1	Disputed and incomplete scope of work	54
3.2	Delay	55
3.3	Additional costs	55
3.4	Legal dispute.....	56
4	Future requirements.....	57
	References	57
III.R4	A method to evaluate the suitability of requirements specifications for offshore projects	59
1	Motivation	60
2	Background and related approaches.....	62
2.1	Outsourcing, offshoring, and application development based on the division of labor	62
2.2	The importance of requirements specifications for offshoring.....	63
2.3	Evaluation approaches for requirements specifications.....	63
3	Conceptual basics	64
3.1	Specification quality	65
3.2	Compensation factors	66
4	Design of the evaluation method.....	68
4.1	Procedure for determining the specification quality.....	68
4.2	Procedure for determining the compensation options	69
4.3	Further refinement of the evaluation	70
5	Evaluation.....	71
5.1	Determination of the specification quality.....	71
5.2	Determination of the compensation possibilities and options for action	73

5.3	Reception of the results.....	74
6	Conclusion.....	75
	References	76
IV	Selection.....	79
IV.R5	Optimal stopping for the run-time self-adaptation of software systems	81
1	Introduction.....	82
2	Flexible software architectures and matching schemes for self-adaptation... 83	
3	Optimal stopping in two self-adaptation scenarios	85
3.1	Limited number of run-time options.....	85
3.2	Limited run-time delay	86
4	Application and simulation	87
4.1	Limited number of run-time options.....	87
4.2	Limited run-time delay	88
5	Summary and conclusion	90
	References	90
IV.R6	Reducing domain level scenarios to test component-based software	91
1	Introduction.....	92
2	Basic assumptions and business model.....	93
3	Constructing linear scenarios	96
3.1	ARIVAL overview.....	96
3.2	Process flow transformation and blocking.....	98
3.3	Example	102
4	Related work	106
5	Summary and conclusions.....	108
	References	109
V	Conclusions and outlook.....	113
V.1	Conclusions	113
V.2	Outlook.....	116
	References	117
