Contents	IX
List of Figures	XIII
List of Tables	XV
List of Abbreviations	XVII
I Focus and scope	1
1 Introduction	3
1.1 Statement of the research problem and relevance	3
1.2 Research design and approach	6
1.3 Structure of the document	7
2 Definition of terms	9
II Theoretical and methodological foundation	11
3 Perspectives from prior literature	13
3.1 The private and collective investment models	13
3.2 The meaning of openness	15
3.2.1 Openness as a gradual concept	16
3.2.2 Aspects of openness	18
3.2.3 The community's perspective	19
3.3 Open source software versus hardware	20
3.3.1 Empirical studies of open source software	21
3.3.2 Empirical relevance of open source beyond software . .	22
3.3.3 Why is the situation different for digital and physical products?	23

3.3.4	But, hardware is becoming much more like software . . .	24
3.4	Why do firms get involved?	25
3.4.1	The firm as a collection of productive resources and dynamic capabilities	25
3.4.2	Value creation and value capture	26
3.4.3	Reasons for firms to freely reveal	28
3.4.4	OS business models	29
3.5	Conclusions and implications for this research	30
4	Research design and methodology	33
4.1	Open source innovation (OSI)	33
4.1.1	A disambiguation of OSI	33
4.1.2	A conceptual framework for studying OSI	34
4.2	Detailed research questions and resultant propositions	35
4.3	Methodological research approach	42
4.3.1	To discover the variety of open design	44
4.3.2	To understand how open design works	47
4.3.3	To investigate the meaning of openness	48
III	On the variety of open design	49
5	Study 1: The open design landscape	51
5.1	The variety of open design	51
5.2	Multivariate analysis	60
5.3	Discussion of outcomes and research propositions rethought	63
6	Study 2: Open design of tangible goods – A comparative case study	67
6.1	Overview of cases	67
6.2	Case descriptions	68
6.3	How does open design work?	72
6.3.1	Who drives open design projects?	72
6.3.2	What is being developed?	73
6.3.3	How are open designs developed and produced?	75
6.3.4	Is open design really open?	76
7	Intermediate conclusions and implications for proceeding	79
7.1	Discussion of first findings	79
7.2	Replicability as a third aspect of openness	81
7.3	Derivation of research hypotheses	83

IV	On openness in open design	87
8	Survey approach	89
8.1	Questionnaire development	89
8.2	Selection of communities	91
8.3	Data collection	91
8.4	The sample	92
8.5	Data preparation	93
9	Study 3: The meaning of openness is not trivial	101
9.1	Software is more open than hardware	102
9.2	Openness is important to open design communities	103
9.3	Openness of software components is more important than openness of hardware components	104
9.4	Highly active developers value openness more than less active developers	105
9.5	The duration of participation does not influence perceived importance	107
10	Study 4: How openness impacts developer's satisfaction and their contribution	109
10.1	Ordinary linear regression models on satisfaction	109
10.2	Multilevel models on developer satisfaction	111
10.3	Do expectations towards openness influence this relationship?	124
10.4	Effects on contributed working hours	125
V	Integration of findings	131
11	Discussion of findings	133
11.1	Summary of findings	133
11.2	Open source software versus hardware - revisited	138
11.3	Scope of generalization and limitations	140
12	Conclusions	143
12.1	Implications for theory	143
12.2	Managerial implications	145
12.3	Implications for future research	147

VI Appendices	149
A Variable explanations	151
B Details – Case study	155
B.1 Interview guideline	155
B.2 List of interviews	157
C Details – Survey	159
C.1 Questionnaire: How open is open source - software and beyond	159
C.2 Survey results	164
C.3 Stability tests	166
D Alternative models	169
D.1 More ordinary linear models	169
D.2 Details for selected multilevel models	171
D.3 Transformations to normality	173
D.4 Models considering expectations	179
